TRANSCRIPT OF MORNING SESSION OF JURY TRIAL DAY 10
BEFORE THE HONORABLE JAN E. DUBOIS
UNITED STATES DISTRICT JUDGE

— — —

APPEARANCES:

For the Plaintiff: WILLIAM T. HANGLEY, ESQUIRE
Hangley, Aronchick, Segal, Pudlin
& Schiller
One Logan Square
27th Floor
Philadelphia, PA 19103

DANIEL J. GOETTLE, ESQUIRE
Baker & Hostetler, LLP
Cira Center
12th Floor

1 (The following was heard in open court at
2 9:50 a.m.)

3 THE COURT: Good morning, everyone. Please
4 be seated.

5 (Pause in proceedings.)

6 THE COURT: Someone has strewn papers back
7 here.

8 MR. RIOPELLE: Ticker tape.

9 THE COURT: Not exactly. But we will
10 proceed. I'm just looking -- we have some issues to
11 address, but we'll address them this afternoon. You
12 may proceed with your next witness.

13 MR. RIOPELLE: The first thing I was going
14 to do, Your Honor, was read two interrogatory
15 responses into the record.

16 THE COURT: And you may. Interrogatories
17 are part of the discovery process about which I had
18 some comments a few days ago. But a written
19 interrogatory is just that. It's a written question
20 and it's responded to by a written answer, not
21 testimony. So Sprint asked Comcast to answer some
22 questions. Comcast did. We'll now here the
23 questions and the answers.

24 MR. RIOPELLE: Only the answers. The
25 parties have agreed to only the answer because part

1 of the question was a little confusing given on some
2 of the procedural matters in this case, Your Honor.
3 So --

4 THE COURT: Is that agreed?

5 MR. HOFFMAN: Yes, Your Honor.

6 THE COURT: Fine.

7 MR. RIOPELLE: So there's two of them.

8 Comcast responds to interrogatory number three, "No
9 Comcast product or service embodies the subject
10 matter of the 870 patent." And then Comcast's second
11 supplemental response to interrogatory number two,
12 "The inventions of the asserted claims of U.S. patent
13 number 6885870 were conceived and constructively
14 reduced to practice on December 23rd, 1999. That is
15 the filing date of Finland application number
16 19992783, to which U.S. patent number 6885870 claims
17 priority.

18 THE COURT: Thank you.

19 MR. RIOPELLE: One other housekeeping
20 thing, Your Honor, is we would move into -- we would
21 ask to be received by the Court Defendant's Drawing
22 Number 1, which Mr. Finkelson used in his opening.
23 This is part of the stuff that we were getting in
24 yesterday afternoon.

25 THE COURT: We'll address how we handle

Dr. Cox - Direct

5

1 those this afternoon, but for now, it's received.

2 (Defendant's Drawing Number 1 is received
3 into evidence.)

4 MR. RIOPELLE: Thank you, Your Honor. And
5 at this point, Your Honor, Sprint would call Dr. Alan
6 Cox.

7 (Pause in proceedings.)

8 ALAN JAMES COX, Defendant's Witness, Sworn.

9 COURTROOM DEPUTY: Please be seated.
10 Please state your full name and spell it for the
11 record.

12 THE WITNESS: Hi, my name is Alan, A-L-A-N,
13 James Cox, C-O-X.

14 THE COURT: Good morning, sir.

15 THE WITNESS: Good morning, sir -- Your
16 Honor.

17 DIRECT EXAMINATION

18 BY MR. RIOPELLE:

19 Q Good morning, Dr. Cox. Could you -- oh, get some
20 water, please. Hopefully, you'll be doing more
21 talking than I am.

22 (Pause in proceedings.)

23 A Sorry.

24 Q That's all right. Dr. Cox, could you introduce
25 yourself to the jury?

Dr. Cox - Direct

6

1 A Sure. My name is Alan Cox. I was born in
2 Ottawa, Canada, but now I live in the San Francisco
3 Bay Area with my wife and son.

4 Q And, Dr. Cox, have you been retained as an expert
5 witness in this case to address the issue of damages?

6 A Yes, I have.

7 Q And as part of your preparation, have you
8 prepared slides for the jury?

9 A I have, yes.

10 Q Okay. Why don't we start with your education?
11 Can you just trace for us your educational
12 background?

13 THE COURT: Before we go any further, can I
14 have a copy of the slide deck?

15 MR. RIOPELLE: I'm sorry, Your Honor.

16 (Pause in proceedings.)

17 MR. RIOPELLE: Here's a copy of the slide
18 deck. Here is a copy of the exhibits. You don't
19 need one?

20 THE COURT: Thank you.

21 MR. RIOPELLE: And may I approach just to
22 give the exhibits to the witness?

23 THE COURT: You may.

24 BY MR. RIOPELLE:

25 Q I don't think you'll need them, but they're right

Dr. Cox - Direct

7

1 there in case --

2 A Thank you.

3 Q All right. Let's get back to it.

4 A Okay.

5 Q Education?

6 A Right. I got a Bachelor's Degree in -- Science
7 Degree in Environmental Science at York University in
8 Toronto. And then I switched gears a little bit and
9 did a Master's Degree in Economics at the University
10 of British Columbia in Vancouver. I took a job for
11 three years as a research economist at the
12 Massachusetts Institute of Technology, and then did a
13 Ph.D. in Business -- actually, in Economics, from the
14 Business School at the University of California at
15 Berkeley.

16 Q And how long have you worked professionally in
17 the field of economics?

18 A Well, I've been working in economics about 35
19 years. I took a job as a research associate at the
20 University of British Columbia after I finished my
21 master's, and then I did that three year stint at
22 MIT, and then continued to do economic research while
23 I was a graduate student at the University of
24 California.

25 Q So after you received your Ph.D., where did you

Dr. Cox - Direct

8

1 start working?

2 A Well, I started going into the business of
3 economic consulting, and eventually ending up in the
4 company I'm out now, NERA, or National Economic
5 Research Associates, where I started in 1994.

6 Q And can you just explain to the jury what NERA
7 is?

8 A Sure. NERA is a company of financial accounting
9 and economic experts who provide assistance to
10 companies that are involved in disputes or
11 applications to the government, regulatory agencies,
12 or with each other. So we might be participating in
13 applications for a merger, for instance, with the
14 Department of Justice's Anti-Trust Division, or
15 helping companies that are making representations to
16 a public utility commission. And often, we're also
17 involved in disputes such as this. In all of this --
18 these sorts of matters we write economic reports that
19 discuss the economic issues related to the disputes
20 and sometimes provide expert testimony the way I am
21 today.

22 Q And, Dr. Cox, what is your current position at
23 NERA?

24 A I'm a Managing Director and I'm also the Chair of
25 the company's Intellectual Property Practice.

Dr. Cox - Direct

9

1 Q And how did you become involved in intellectual
2 property issues?

3 A Well, a lot of the work we do in economics is
4 valuation, including valuation of intangible assets,
5 like intellectual property. So I was involved in
6 doing a fair amount of that sort of work. And those
7 issues are obviously important in intellectual
8 property litigation, such as this. And I've done a
9 lot of work in anti-trust as well, and so a lot of
10 the anti-trust issues I was dealing with was the
11 impact of intellectual property on how markets work.

12 Q Now, have you done any teaching at universities?

13 A Yeah, I've taught graduate level courses at
14 Northeastern University and at St. Mary's College in
15 California where I taught cases -- or taught courses
16 on business strategy and business economics, or
17 economics for managers. And I also give lectures at
18 law schools usually on economic issues related to
19 intellectual property damages. For instance, later
20 this semester, I'm going to be giving a seminar or a
21 class on damages and trade secret matters here at the
22 University of Pennsylvania's Law School.

23 Q Have you published any articles in the field of
24 economics?

25 A Yeah, I've published riff articles or papers in

Dr. Cox - Direct

10

1 riff journals, and I also published in various trade
2 journals and magazines or publications that relate to
3 business and policy issues.

4 Q And have you ever given any lectures or
5 presentations on economic issues that may come up in
6 litigation?

7 A Yeah, I do that regularly, and I've designed
8 courses for lawyers on economic issues related to
9 intellectual property and litigation. I've given
10 seminars on valuation of intellectual property all
11 around the world, not only in the United States, but
12 in Europe and Japan and Korea. I've done a fair
13 amount of that also in China, including giving
14 talk -- even gave a talk to some justices of the
15 Supreme Court of China on damages issues in
16 intellectual property matters and valuation of
17 intellectual property. And last year, the United
18 States Patent Office sent me to China to talk to
19 judges some more and professionals of the various
20 intellectual property offices in China to sort of
21 move -- help move along some issues between the
22 United States and China on intellectual property
23 issues.

24 Q Now, I notice one of the publications that you
25 called out on your slide is called "Compensatory

Dr. Cox - Direct

11

1 Damages Issues in Patent Infringement Cases," a
2 pocket guide for federal district court judges. Can
3 you explain to the jury what that is?

4 A Yeah, that was something that was arranged by
5 Justice Michel -- Judge Michel. Michel at the time
6 was the Chief Justice of something called the Court
7 of Appeals for the Federal Circuit. The Court of
8 Appeals for the Federal Circuit is the Appeals Court
9 that hears all patent cases, all appeals to patent
10 cases. All appeals from district courts that go to a
11 higher court go to -- first go to the Federal
12 Circuit, one step between this court and the Supreme
13 Court.

14 Judge Michel brought together a group of
15 intellectual property professionals to write this
16 pamphlet. I should say that visual person took a
17 little bit of liberty. It's not quite that thick a
18 book. But a pamphlet that would assist judges in
19 managing and thinking about how to manage
20 intellectual property cases, or, specifically, the
21 damages phase of patent cases.

22 Q So now, obviously, this case involves
23 telecommunications. Can you tell us a little bit
24 about your experience in telecommunications?

25 A Sure, I've been, again, doing telecommunications

Dr. Cox - Direct

12

1 work for about 35 years. I started doing it when I
2 was working in -- as a consultant while I was in
3 graduate school, and that morphed over into my
4 thesis. This was, of course, long before there was a
5 cellular network, and I was doing mostly work, of
6 course in that time on wireline issues or just the
7 old-fashioned telephone company. But I've been --
8 continued to be involved in telecommunications issues
9 through the years, including sort of traditional --
10 dealing with traditional telephone service, as well
11 as dealing with many of the issues that come up in
12 litigation related to the cellular network, in
13 particular, dealing with some of the issues that come
14 around -- come up dealing with the thousands of
15 patents that are involved in the cellular network.

16 Q Now, how about smart phones? Have you done any
17 work on smart phones or cases that involve smart
18 phones?

19 A Yeah, I've done a lot of work in smart phones.
20 For instance, I was Google's damages expert,
21 copyright damages expert, in Oracle v. Google, which
22 until Apple v. Samsung came along was the biggest and
23 sexiest smart phone case going for a while. But I've
24 also done a lot of other cases having to do with
25 smart phones and, particularly, with the intellectual

Dr. Cox - Direct

13

1 property issues related to smart phones.

2 Q And can you tell us who some of your clients have
3 been?

4 A Sure. I mean in the high tech area they've been
5 Apple, Samsung, T-Mobile, AT&T, Verizon, Broadcom,
6 Texas Instruments. And then sort of on the more
7 interesting, or non-high tech areas, I've also
8 done -- did an interesting case for Callaway golf
9 balls when they were dealing with some dimp -- some
10 patents that were related to the pattern of their
11 dimples on their golf balls.

12 Q All right. So in your previous cases, do you
13 usually testify for defendants or do you usually
14 testify for plaintiffs?

15 A I think -- I certainly do both sides and it's
16 pretty evenly split. I'm not really sure what the --
17 what the split is right now, but it's -- I'd say -- I
18 do do work for both sides.

19 MR. RIOPELLE: All right. At this time,
20 Your Honor, Sprint would tender Dr. Cox as an expert
21 in the field of economics and intellectual property
22 damages.

23 MR. HEIST: No objection.

24 THE COURT: We will hear Dr. Cox's
25 testimony as an expert in economics and intellectual

Dr. Cox - Direct

14

1 property damages.

2 BY MR. RIOPELLE:

3 Q Okay. So just to restate, you're here to address
4 the issue of damages in this case, correct?

5 A Yes, that's right.

6 Q All right. Now, before we go any further, are
7 you asserting that Sprint has infringed the 870
8 patent?

9 A No, I'm just assuming that for the sake of
10 argument only. And I understand that it's you, the
11 jury, that decides whether or not Sprint has, in
12 fact, infringed a patent that you find to be valid.
13 And if -- of course, if you find that Sprint doesn't
14 infringe and the patent is not valid, then, of
15 course, you don't have to pay attention to my -- you
16 don't -- you don't have to deal with my testimony at
17 all because damages, of course, are zero. But in the
18 event that you do find that Sprint has infringed a
19 valid patent, I'd just like to be able to tell you
20 what I think a reasonable payment would be for
21 Sprint's use of that technology. In order to do
22 that, I have to assume that you're going to -- that
23 for that particular circumstance you do find that
24 Sprint has infringed.

25 Q All right. So let's turn to the work that you've

Dr. Cox - Direct

15

1 done in this case. When were you retained?

2 A About two years ago.

3 Q And, specifically, what were you asked to do?

4 A I was asked to review the report that was going
5 to be coming -- review and evaluate the damage claims
6 that would be made by Comcast's damages expert in
7 this case. It turned out to be Ms. Riley. And then
8 I was asked to opine as to whether or not I thought
9 her methodology was reliable, and if not, find --
10 undertake an independent economic analysis to
11 determine the appropriate measure that -- appropriate
12 measures and appropriate amount of money that should
13 be awarded to Comcast to be paid by Sprint for the
14 use of the intellectual property in this case.

15 Q All right. And so what work did you do to
16 prepare yourself to, you know, testify here today?

17 A Well, we start off by reviewing literally
18 thousands and thousands of pages of documents related
19 to this case. I also read the reports of Ms. Riley
20 and I also undertook some research on some of the
21 technical issues, or at least discussed some of the
22 technical issues, with people at Sprint and, of
23 course, with Mr. Mark Lanning, who is the technical
24 expert for Sprint in this matter, and also for --
25 with Dr. Christopher Dippon, who we'll be hearing

Dr. Cox - Direct

16

1 from later about some of the cost issues.

2 Q And --

3 A I also undertook my own independent analysis of
4 the -- of the situation in this case.

5 Q And do the documents and information listed on
6 the slide you prepared, does that summarize the
7 information you looked at?

8 A Yeah, that's right. There's Ms. Riley's report,
9 I looked at a lot of industry reports, that is
10 analyst reports and reports that discuss the various
11 aspects of the cellular network or the cellular
12 business, their sales forecast, financial documents,
13 Sprint's financial filings to the SEC, and documents
14 produced in this case, including, for instance,
15 things like the interrogatories and the answers that
16 we just heard some of this morning. And then I
17 talked with the experts that I mentioned earlier.

18 Q All right. So we're not accused of burying the
19 lead, let's get -- let's get to your opinions. What
20 are your -- can you just summarize your opinions in
21 this case?

22 A Sure. Basically, my opinion is that the evidence
23 in this case, again, assuming that there's an
24 infringement and the patent is valid, is consistent
25 with the payment of a reasonable royalty of \$1.5

Dr. Cox - Direct

17

1 million. I'm also of the opinion that Ms. Riley's
2 opinion is based on unreliable methodology and
3 ignores many important facts in this case. And to
4 put it more broadly, I don't think Ms. Riley's
5 methodology makes sense in the context of a complex
6 cellular network which is very expensive and risk to
7 build and which incorporates thousands of pieces of
8 intellectual property, including thousands of
9 patents.

10 Q And this is the second time you've mentioned the
11 number of patents. Do you -- do you have any sense
12 of how many patents are involved in cellular
13 networks?

14 A Yeah, I do. And if you would like I could
15 explain how I got that number, but I'd say there are
16 at least 10,000, probably tens of thousands, of
17 patents involved in the operation of a cellular
18 network, and we're here dealing with just one of
19 those that is being asserted as being part -- or
20 operating as part -- or operating with a cellular
21 network.

22 Q And do some of these patents have to do with
23 standards?

24 A Yeah, that's sort of how I know that there are a
25 lot of patents involved. We've heard a lot in this

Dr. Cox - Direct

18

1 case about standards, the -- basically, the
2 compilation of methods and processes that everybody
3 agrees to so that the different components of the
4 cellular network can speak to each other, different
5 components made by different people -- different
6 companies rather, and operated by different
7 companies.

8 Each of those standards, as I said,
9 describes a whole bunch of engineering processes and
10 methods. And the point is that a lot of those
11 methods and steps and processes are patented, they're
12 covered by patents. And some of those patents are
13 called -- are essential to the standard. So we --
14 and we actually know the number of patents that are
15 essential -- or have a good idea of the number of
16 patents that are essential to operating a standard,
17 and from that, can get -- infer some -- infer
18 something about the number of patents that are
19 involved in the cellular network.

20 Q Now, has the 870 patent been listed as essential
21 to offering SMS and MMS services?

22 A No, it's not.

23 Q Do these patents that you were talking about, do
24 they have an impact on the operation of the -- of a
25 cellular network such as Sprint's?

Dr. Cox - Direct

19

1 A Sure. I mean they are in everything that we --
2 that it takes to make the cellular network operate.
3 It's in all the equipment, all the switching
4 equipment, all the bay stations, and it's in the
5 handsets as well. And it's important to remember
6 also, even though we're talking about lots of
7 standards, each of which have hundreds, if not
8 thousands, of essential patents, but we're talking
9 about other components of the handset that is also --
10 that are also patented. You know, there's a -- the
11 screen has patents associated with it, the touchpad,
12 if it's got a touchpad, has patents associated with
13 it. Even the design of some phones are patented.
14 That was the issue that came up in Apple v. Samsung
15 that was recently decided in the Supreme Court. So
16 there's just a lot of patents and a lot of different
17 aspects and components of the cellular network.

18 Q Well, do all of these patents impact the cost of
19 cellular services?

20 A Certainly. People pay license fees for those
21 products, for the use -- to use those patents.
22 Companies like Sprint and others undertake research
23 and development so they can develop their own patent
24 portfolios that get involved in messaging and other
25 parts of the cellular network. And research and

Dr. Cox - Direct

20

1 development, of course, all costs money. And some of
2 the components, of course, that Sprint buys have
3 incorporated intellectual property that the upstream
4 supplier of that product paid for as well. So all of
5 these costs contribute to the cost of providing
6 services on a cellular network.

7 Q Now -- okay. You've been talking about all these
8 patents. What does this have to do with the
9 reasonableness of Ms. Riley's opinion?

10 A Well, I think an easy way to think about the
11 reasonableness of Ms. Riley's opinion is just to
12 extrapolate what -- the \$150 million that she claims
13 is an appropriate payment for this one patent. Let's
14 suppose that the patent -- number of patents involved
15 in the operation of a cellular network is only
16 10,000, which I think is, you know, sort of lower
17 bound. Well, if you multiply \$150 million by 10,000,
18 you get \$1.5 billion in patents that -- sorry, \$1.5
19 trillion in patents that are being used by -- value
20 worth of patents that are being used by Comcast --
21 sorry, by Sprint in this -- in this case -- in the
22 operation of its cellular network. And to scale up
23 \$150 million to 10,000, you get \$1.5 trillion worth
24 of patents that Sprint is using.

25 Now, Sprint only has one-seventh of the

Dr. Cox - Direct

21

1 market share in the United States. It's only got
2 one-seventh of the market. So you have to
3 extrapolate that up again to figure out what the --
4 what the value is of all the intellectual property
5 that's being used by all companies providing wireless
6 services in the United States. When you do that you
7 get a number of \$10 trillion. Now, that is just not
8 credible. That's just far too high a number to
9 associate with just the patents operating a cellular
10 network.

11 Q Can you -- can you put this \$10 trillion number
12 into context?

13 A Well, sure, \$10 trillion is more than half of the
14 gross national product of the United States. And
15 back in 2010, which -- 2005, which is the relevant
16 periods that we're talking about, it represented a
17 much higher percentage of the gross national product.
18 It's truly a mind-blowing number.

19 Q Okay. So you calculated, didn't you, a
20 reasonable royalty in this case, right?

21 A Yes, I did.

22 Q All right. So let's move on to that topic.

23 A Okay.

24 Q Can you just remind the jury, although I'm sure
25 they've heard it 100 times, what a reasonable royalty

1 is?

2 A A reasonable royalty is the payment that a
3 company makes in order to have the right to use the
4 patent -- let me start again. It's the payment that
5 a company makes to a patent owner for the right to
6 utilize that patent in its product or service.

7 Q And how do you go about determining the amount
8 for a reasonable royalty?

9 A Well, one method is to undertake a hypothetical
10 negotiation or model of a hypothetical negotiation.

11 Q And can you just explain what the hypothetical
12 negotiation is?

13 A Sure. The hypothetical negotiation is a method
14 of trying to come down to a realistic royalty rate by
15 determining -- by modeling a negotiation between the
16 two parties who would own the -- between the two
17 parties who are going to use the intellectual
18 property and to own the intellectual property at the
19 time that the user is about to start utilizing the
20 intellectual property.

21 Q So in this case who would be the parties sitting
22 down at the hypothetical negotiation?

23 A It would be Nokia and Sprint.

24 Q Is that what you put on --

25 A Yeah, that's --

Dr. Cox - Direct

23

1 Q -- on your --

2 A That's what we're showing here on this slide,
3 Sprint sitting on one side of the bargaining table
4 and Nokia sitting on the other side of the bargaining
5 table, and they're going to negotiate what they --
6 what the -- what Sprint is going to pay for the right
7 to utilize the 870 patent.

8 Q Now, would Comcast have participated in the
9 hypothetical negotiation?

10 A No, Comcast is not in the negotiation at all. It
11 didn't own the patent at the time and so -- and since
12 we're talking about the hypothetical negotiation
13 taking place in 2005, Comcast didn't own the patent
14 at the time and wouldn't be involved in the
15 negotiation at all.

16 Q So is it fair to say that we need to concentrate
17 on what Sprint and Nokia would have been thinking
18 about?

19 A Yes, that's right.

20 Q All right. Now, we call it a hypothetical
21 negotiation, but is a hypothetical negotiation
22 divorced from reality?

23 A No, it's not. It's supposed to come up with a
24 reasonable royalty, something that's reasonable and
25 makes business sense. And the statute, in fact -- or

Dr. Cox - Direct

24

1 the various -- the law basically says that. And
2 that, of course, makes economic common sense as well.
3 Nobody is going to make -- nobody is going to pay an
4 unreasonable amount of money to utilize a technology.
5 They're not going to use something that is -- they're
6 not -- nobody is going to pay more than the
7 technology is worth to utilize the technology. And
8 the hypothetical negotiation is supposed to come up
9 with something that is reasonably realistic. It's
10 true, we make some simplifying assumptions, but
11 that's in order to be able to -- able to come to a
12 conclusion about what a reasonable royalty would be.

13 Q And so what type of evidence did you rely upon in
14 determining what the reasonable royalty would be in
15 this case?

16 A Well, one thing I like to do is look to see what
17 happens in the market. That's usually a good way of
18 determining what -- how a hypothetical negotiation
19 would have come out. And so what I did is I looked
20 for comparable transactions, situations where a
21 similar license was licensed -- or a similar
22 technology rather was licensed, or in this case where
23 exactly the same technology was, actually, in this
24 case, purchased.

25 Q All right. Before we turn to that, just looking

Dr. Cox - Direct

25

1 at market transactions, is -- I know you said you
2 like to look at it. Is this something normally
3 relied upon by economists?

4 A Yeah, I didn't mean to imply that it was just
5 something I do. This is some -- an accepted
6 valuation technique that all valuation professionals
7 utilize. In fact, Ms. Riley had it as one of the
8 methodologies that is appropriate to use in coming up
9 with a hypothetical -- or with a reasonable royalty.

10 Q Okay. Is relying on these market transactions
11 something that this jury can do to determine a
12 reasonable royalty if they have to do that?

13 A Yes, it is. My understanding is that they'll be
14 given an instruction or something that is consistent
15 with that. Here it is. Basically, it says that one
16 of the factors that may be considered in determining
17 what a reasonable royalty is is comparable license
18 agreements such as those covering the use of the
19 claimed invention or similar technology. So we're
20 actually going to discuss a license agreement that
21 covers -- more like, actually, a transaction that
22 covers the use of the same tech -- same invention or
23 the claimed invention in this case.

24 Q Can you give us an example in everyday ordinary
25 life where you would use comparable transactions?

Dr. Cox - Direct

26

1 A Sure. I mean we've all purchased houses and
2 cars, and if you wanted to sell or buy a used car,
3 you would go to the Kelley Blue Book, and the Kelley
4 Blue Book gives you a compilation of -- basically,
5 their summary of a bunch of comparable transactions
6 for every make and model and year of car. With some
7 adjustments that they make for -- or allow you to
8 make based on mileage, they give you a list of
9 comparables. A you would not think of selling a car
10 or buying a car without referencing a comparable in
11 that way and determining the value of what it is
12 you're going to buy or sell based on those
13 comparables.

14 Q Now, but if you're -- if you're in a transaction,
15 do you just accept the Kelley Blue Book price?

16 A Well, no, you want to kick the tire, so to speak,
17 or if it's a -- if you see the car is in particularly
18 bad condition for a car that's only been driving
19 20,000 miles, or in particularly good condition for
20 having been driving 100,000 miles, or because it's
21 got a really beautiful color that you really want to
22 have, you might make an adjustment from the Kelley
23 Blue Book price. But still, it would be the
24 comparable that would be your anchor, so to speak, in
25 terms of determining what price you would want.

Dr. Cox - Direct

27

1 Q Now, sticking with your car analogies, suppose
2 that a potential seller recently, you know, retired
3 or had a decrease in income. Would the seller accept
4 a lower price for the car?

5 A No. You -- the price for the car is determined
6 by the market, and just because you have a lower
7 income because you're retiring and you don't need as
8 big a car, you don't need the car as often, it
9 doesn't mean that you're going to accept a lower
10 price. You're going to get the best price you can
11 based on what the market is offering.

12 Q Now, what if -- what if the buyer of the car is
13 going to use it for a different purpose? Would that
14 affect the price?

15 A No, if the buyer wants to use the car for some
16 uses not nearly as -- not quite as valuable as
17 represented by that particular car, and you wanted to
18 sell -- and you were the seller of the car, you
19 wouldn't sell the car to a buyer just because he had
20 a lower value use for it. You would find another
21 buyer who would be willing to pay you for the car
22 something similar to the Blue Book value.

23 Q All right. So of this comparable stuff, how does
24 all this relate to determining a reasonable royalty
25 for a patent?

Dr. Cox - Direct

28

1 A Well, if you can find a transaction for the same
2 or a similar patent, then that's a pretty good
3 indication as to what the patent is worth.

4 Q And is there such a transaction in this case?

5 A Yes, there is. There's a purchase by Comcast of
6 this trans -- of this patent from Nokia in 2010.

7 Q And I think what you've put on the screen here
8 is -- is this the patent purchase agreement?

9 A Yes, it is. You can see it's highlighted, the
10 names of the corporations, Nokia and Comcast, and
11 there's the date, June 30th, 2010, the effective date
12 of the transaction.

13 Q And what was the price?

14 A Comcast agreed to pay for the patents that were
15 being sold here, which was more than just the 870 --
16 they agreed to pay for the portfolio of patents
17 \$600,000.

18 MR. RIOPELLE: And just for the record,
19 Your Honor, the exhibit that is being shown on the
20 slide, it is slide ten, is Exhibit PX-8, which has
21 been admitted already.

22 THE COURT: Thank you.

23 BY MR. RIOPELLE:

24 Q Now, you mentioned portfolio of patents. On your
25 next slide you have appendix A. Can you explain what

Dr. Cox - Direct

29

1 that is to the jury?

2 A Yeah, this lists all the patents and patent
3 applications that Nokia agreed to sell to Comcast
4 with this -- with this sale -- in this sale.

5 Q And you see some of these are in foreign
6 countries. What could Comcast do with the patents
7 issued by other countries?

8 A Well, it could -- it could assert these patents
9 against companies in other countries -- in other
10 countries. It could sell it to somebody who was
11 interested in asserting that patent. And that person
12 who -- somebody who -- or if Comcast found that a
13 competitor, for instance, was making a product in
14 China and importing it into the United States in
15 competition with its own product, it could sue that
16 seller in China and make -- possibly restrict that
17 company's ability to manufacture a product or get
18 income from that manufacturer in China by forcing it
19 to agree to a patent license based on what that
20 patent is worth.

21 Q So do these patents in other countries, do they
22 have value?

23 A Yeah. Yeah, for that very reason. You can get
24 money from them or you can use them to your
25 competitive advantage.

Dr. Cox - Direct

30

1 Q And you see down the right-hand column there's a
2 couple places where it says "pending." Do you see
3 that?

4 A Yes.

5 Q What do you understand "pending" to mean?

6 A Well, I think that these are applications, so
7 these are patents that have -- patent applications
8 that have been made to various patent offices around
9 the world, and they're in the process of being
10 approved or disapproved.

11 Q And do these patent applications have value?

12 A Yes, there's a probability that they'll -- each
13 one of them has a probability that it will be
14 approved, and certainly some of them will be
15 approved. And if so, then they would become patents
16 that can be asserted in the manner I just described a
17 moment ago. So they have value.

18 Q And so what is your understanding of what Nokia
19 first offered to sell this portfolio of patents for?

20 A I understand that their opening offer was to sell
21 this to Comcast, all of these patents to Comcast, for
22 \$1.5 million.

23 Q And what's your understanding of what the final
24 price negotiated between Nokia and Comcast was?

25 A We saw that in the previous slide. That was

Dr. Cox - Direct

31

1 \$600,000 for all of these patents.

2 Q Okay. And when you were talking about your car
3 analogy you were talking about that you wouldn't rely
4 on the Kelley Blue Book price, you would make some
5 adjustments. Do you need to make any adjustments
6 when you look at this price of \$600,000, when you're
7 doing that in terms of the hypothetical negotiation?

8 A Well, yeah, there are a few, one of which is the
9 fact that, of course, we're just talking about one of
10 the patents that are being listed here.

11 Q And so how many -- how many U.S. patents were
12 sold?

13 A There are three U.S. patents and one application,
14 but three accepted patents.

15 Q So on those three U.S., do you have to make any
16 adjustments for the value of each one of those
17 patents?

18 A Well, one simple thing you could do is you could
19 say well, let's say they're -- all the other patents
20 are, in fact, worth nothing, that is all the non-
21 United States patents are worth nothing, all the
22 applications are worth nothing. That means that
23 there are only three patents that are actually worth
24 anything. So you can just take the three patents,
25 divide that into the \$600,000 price, and that would

Dr. Cox - Direct

32

1 be \$200,000 per patent.

2 Q Now, is there anything that has to do with one of
3 the other two patents, besides the 870, that you may
4 make a further adjustment for?

5 A Yes. One of the patents is described as
6 "essential," "standard essential." Another problem
7 with standard essential patents, and one reason why I
8 know how many there are, is because a standard
9 essential patent is one in which the owner has agreed
10 that the patent will only be licensed at what is
11 referred to as fair and reasonable rates. So nobody
12 actually knows what that -- what a fair and
13 reasonable rate is. It's actually the subject of a
14 lot of litigation by itself. And some people -- but
15 some people assert that a fair and reasonable rate
16 for a standard essential patent is zero. I don't
17 believe that. I don't agree with that. But for the
18 sake of argument, I'm going to accept that patent --
19 the worth of that patent as zero because it can't be
20 asserted for a royalty rate greater than zero.

21 Q Okay. So if you -- if you assume that that
22 standard essential patent is worth zero, what
23 adjustment do you need to make on the remaining two
24 U.S. patents?

25 A Well, then instead of dividing \$600,000 by three,

Dr. Cox - Direct

33

1 I'm going to divide \$600,000 by two, and that means
2 that each of the patents was worth \$300,000.

3 Q And one of those patents is the 870 patent?

4 A That's correct.

5 Q And -- well, why don't you go ahead and get
6 your --

7 A Thank you.

8 Q -- water?

9 (Pause in proceedings.)

10 A It's always amazing how dry your mouth gets when
11 you're doing this.

12 Q All right. So you said -- you just mentioned the
13 number of \$300,000. Does \$300,000 seem like a
14 reasonable valuation to you?

15 A Yeah. In my experience, that is a quite high
16 price for a patent -- single patent, but not
17 unreasonable.

18 Q Now, does the fact that Nokia was selling this
19 have any bearing on your conclusion?

20 A No, it -- Nokia -- well, it doesn't make much
21 difference one way or the other except Nokia is a
22 sophisticated company. It, as you heard, has
23 contributed massively to some of the standards that
24 are involved in a cell -- in the cellular network.
25 And so I would expect that it would have made sure

Dr. Cox - Direct

34

1 they got -- it got a price that was fair and
2 reasonable based on its extensive experience and
3 knowledge about what the patent did and what its
4 worth was.

5 Q Now, did Nokia consider the 870 to be a
6 relatively valuable patent?

7 A No, the evidence indicates that it did not.

8 Q And going on to the next slide, do you recognize
9 this as the invention report --

10 MR. RIOPELLE: -- which has previously been
11 admitted, Your Honor, as DX-150?

12 THE WITNESS: Yes, I do recognize this as
13 the invention report. This is a report that was
14 filled out by the manager of the person who made the
15 invention at the time that the research that went
16 into the invention was more or less completed. And
17 in that report, she, the manager, rated the
18 invention, which is described in field two there.
19 But she rated the invention as a -- on a scale of
20 zero to five, as a two, meaning that in her view, it
21 was modest, it had modest value, because it was easy
22 to design around, or it had only a modest potential
23 for standard specification.

24 BY MR. RIOPELLE:

25 Q Okay. And so what is the date of this document?

Dr. Cox - Direct

35

1 A It's late 1999. It's a little hard to read in
2 the previous field, but --

3 Q And can you remind us when Nokia sold the 870
4 patent to Comcast?

5 A Yeah, that was in 2010.

6 Q Okay. So the 1999 to 2010, how do those two
7 dates compare to the date of the hypothetical
8 negotiation?

9 A The hypothetical negotiation was halfway between
10 those two dates in 2005.

11 Q All right. Well, let me show you -- this is part
12 of the timeline that Ms. Riley used during her
13 testimony. What do you conclude about the value of
14 the patent in 2005 from the fact that it was rated a
15 two in 1999 and it was sold for, as you said,
16 \$300,000 in 2010?

17 A Well, I would expect if I sort of thought of
18 the -- of this as a -- the vertical part of -- side
19 of this graph or this timeline as representing the
20 value of the patent, then I would expect that if the
21 patent was relatively low in value in 1999, as we saw
22 a moment ago -- if Nokia itself thought the patent
23 had relatively low value in 1999, and it had a value
24 of about \$600,000 in 2010, I would expect that a
25 price between those two points in time would reflect

Dr. Cox - Direct

36

1 those two valuations around that time.

2 Q But how does Ms. Riles's -- how would you graph
3 Ms. Riley's valuation of that between the times then?

4 A Well, instead of, you know, a line that would
5 connect this point here, this relatively low
6 valuation 1999, and the \$600,000 valuation in 2010,
7 instead of giving us a straight line between those
8 two points, Ms. Riley wants us to believe that the
9 patent value went way up around 2005 and then went
10 way back down in 2010. And she doesn't provide any
11 explanation as to why there was such a huge
12 escalation in the value of the patent just around the
13 time of the hypothetical negotiation.

14 Q All right. In your analysis of the hypothetical
15 negotiation, did you take into account the popularity
16 of messaging?

17 A Yes, I did.

18 Q And what is your -- how did you do so?

19 A Well, I forget what the exact numbers are, but I
20 think in December of 2005, there was something like 8
21 billion messages sent per month. And by 2010, on the
22 other hand, the number of messages being sent was
23 many times greater than that. It was in the hundreds
24 of billions I believe.

25 Q All right. Now let's -- just so we're clear,

Dr. Cox - Direct

37

1 what would Sprint receive as a result of the
2 hypothetical negotiation?

3 A Sprint would receive the right -- only the right
4 to utilize -- use the patented technology on its own
5 cellular network.

6 Q Would they receive a -- do you agree that under
7 the hypothetical negotiation, they would receive a
8 non-exclusive license?

9 A That's correct. They wouldn't -- other companies
10 would still be allowed to use that patent in
11 competition with Sprint if Nokia wanted to license to
12 other companies, which they presumably would.

13 Q And as a result of the patent purchase agreement
14 between Nokia and Comcast, what did Comcast receive?

15 A Comcast got the ownership of the patent, so
16 Comcast got the right to assert that patent not only
17 against Sprint, but against all carriers in the
18 United States who they allege would have been
19 infringing the patent --

20 Q So --

21 A -- with their messaging.

22 Q So which would be more valuable, to have a
23 license or to own the patent?

24 A Well, it would be much more valuable to own the
25 patent because you can assert against all carriers in

Dr. Cox - Direct

38

1 the United States, rather than just utilize it
2 yourself.

3 Q All right. Another thing that we heard from Ms.
4 Riley about the hypothetical negotiation is you have
5 to assume that the patent is valid and infringed. Do
6 you agree with that?

7 A Yes, I do agree with that.

8 Q All right. So do you -- did you take that into
9 account when you were doing a reasonable royalty?

10 A Yes, I did. I mean my reasonable royalty is many
11 times higher than the comparable transaction, and one
12 of the reasons is because you have to take into
13 account the fact that when the two parties in the
14 hypothetical negotiation or an -- rather, the two
15 parties in the real world negotiation are negotiating
16 over the patent most of them realize that there's
17 some possibility that either the Patent Office will
18 decide that it shouldn't have issued the patent in
19 the first place, or that a court will decide that the
20 patent shouldn't have been issued in the first place,
21 or that in this case Sprint doesn't infringe. So,
22 you know, in the hypothetical negotiation, on the
23 other hand, both sides know that the patent is valid
24 and infringed. That's one of the simplifying
25 assumptions that we make. So you have to make an

Dr. Cox - Direct

39

1 upward adjustment from the comparable in order to get
2 the reasonable royalty that would arise out of the
3 hypothetical negotiation.

4 Q All right. And so -- just to put this in
5 context, you're comparing the hypothetical
6 negotiation to the actual trans -- Nokia-Comcast
7 transaction, correct?

8 A That's right. Or put another way, I'm making the
9 sorts of adjustments that you make when you buy a car
10 after you look at the Kelley Book to determine -- to
11 make sure that you're getting a fair price given that
12 the car might be sold at a slightly different time or
13 have different conditions -- it be in a different
14 condition than you expect the average car would have.

15 Q So were there concerns about the validity of the
16 870 patent at the time of the Nokia-Comcast
17 transaction?

18 A There were some concerns, but my understanding is
19 that Comcast felt confident -- relatively confident
20 that the patent was valid.

21 Q Okay. So based on all the adjustments, based on
22 the Nokia-Comcast transaction, what is your opinion
23 on what Nokia and Sprint would have agreed to in a
24 hypothetical negotiation in 2005?

25 A It's my opinion that they would have agreed that

Dr. Cox - Direct

40

1 sprint would pay a lump sum royalty to cover its
2 continued use of the patent throughout the life of
3 the patent of \$1.5 million.

4 Q Okay. So you've just given the jury a reasonable
5 royalty calculation. Did you do any other analysis
6 to give you a sense of what the value of the 870
7 patent was?

8 A Yes, I did.

9 Q And what did you call -- what is this?

10 A Well, I undertook something that's called patent
11 citation analysis.

12 Q Okay. Before you explain to them -- the jury
13 what the patent citation analysis is, is your opinion
14 in this case based on the patent citation analysis?

15 A No, it's not. I just did this to corroborate my
16 finding on the \$1.5 million reasonable royalty.

17 Q Okay. So can you explain to the jury what a
18 patent citation analysis is?

19 A Yes. One of the things that has to -- as you
20 know, one of the things -- one of the features of a
21 patent is that it describes the technology that's
22 being patented. And another part of a patent is that
23 a reference is made to previous patents, citations
24 made to previous patents, and these previous patents
25 are related to the patent that's being issued because

Dr. Cox - Direct

41

1 they cover a similar subject matter or very close
2 subject matter. I think there was some discussion
3 about other patents and the -- in the -- in the --
4 what do you call it -- the validity part of this
5 case. And you often see -- well, you do see patents
6 citing earlier patents with similar technology.

7 Q Well, why don't we -- I think you made a slide on
8 this.

9 A Yeah.

10 Q And let me see if I'm smart enough to --

11 (Pause in proceedings.)

12 Q All right. I think on this slide is the face
13 page of the 870 patent.

14 MR. RIOPELLE: And, Your Honor, this is
15 PX-2, which has been admitted.

16 THE WITNESS: Yeah. Yeah, so this is the
17 face of the patent. And, as I said, in addition to
18 the abstract on the front page, there are references
19 made by the 870 patent to two earlier patents, the
20 347 patent and the 820 patent that are listed there,
21 both issued in 1999.

22 BY MR. RIOPELLE:

23 Q Now, who decides what earlier patents are cited
24 on the face of a patent?

25 A Well, in making an application to the Patent

Dr. Cox - Direct

42

1 Office, the inventor and the attorneys working with
2 the inventor in making the application have a legal
3 responsibility -- legal responsibility to identify
4 all patents that they think or know relate to the
5 technology at issue in the patent that is being
6 issued or the patent that is being applied for.

7 Q Okay.

8 A And I should also say in addition to that, patent
9 examiners -- every patent in the process of being --
10 in the application process is gone through by
11 somebody called a patent examiner, and those patent
12 examiners, who are experts, subject matter experts,
13 in their field and know a lot about what the
14 important patents in their field are, those examiners
15 may also suggest additional references be placed in
16 the patent.

17 Q Okay. So what we're seeing here is the patents
18 that the 870 patent cited, correct?

19 A That's correct.

20 Q Okay. So how do you figure out what later
21 patents cite the 870 patent?

22 A Basically, the short answer to that is the Patent
23 Office keeps records of that. So you can go into the
24 Patent Office website and you can click on a button
25 and you can see every patent -- later patent that,

Dr. Cox - Direct

43

1 for instance, has cited the 870 patent.

2 Q All right. And what is the importance of these
3 patent citations? For example, what is the
4 importance of the 870 being cited by later patents?

5 A Well, it turns out -- and there's a lot of
6 empirical work that's been done on this, but it turns
7 out that the value of a patent is strongly
8 correlated, or there's a strong relationship, between
9 the number of times a patent is val -- is cited by a
10 later patent and the value of that patent. So if a
11 patent is cited a relatively large amount of times,
12 that's going to -- that tends to be a relatively
13 valuable patent.

14 Q Did you -- I think you put together a
15 demonstrative on this.

16 A Yeah. So this is just a way of describing this.
17 So I imagine a patent that was issued by the Patent
18 Office in 2008 in a certain technology area, which is
19 described as H04L, which we'll maybe get into later.
20 And I've just sort of stylistically shown a lot of
21 other patents that were granted in later years that
22 cite back to the patent that's being -- that's been
23 issued in 2008. And we can compare that with another
24 patent issued in the same technology class at about
25 the same time, and it's cited by a lot fewer later

Dr. Cox - Direct

44

1 patents, indicating that it's probably not as
2 valuable as the other patent that I showed.

3 Q All right. So you're saying that there is some
4 sort of correlation between the time -- number of
5 times a patent is cited and its value. Do you have
6 an explanation for why there's this correlation?

7 A Sure. And as I mentioned a moment ago, the
8 patent -- the patents have a lot of description about
9 what the invention is all about, and so -- and these
10 descriptions are published obviously when the patent
11 is published. And so people who are working in a
12 particular field might hear about or read something
13 about a new patent that might have an original idea
14 or something that people recognize as being
15 relatively valuable. And directors of research at
16 company research labs or at universities or
17 independent research centers will tend to start doing
18 research in the same area. And because they're doing
19 research in the same area, they're going to have to
20 cite that patent or any patents that are similar to
21 that that describe this valuable breakthrough.

22 Q Now, is there research being done currently that
23 is looking into this correlation between the number
24 of times a patent is cited and the value of the
25 patent?

Dr. Cox - Direct

45

1 A Yeah, there's a lot of research being done to
2 test that relationship, and it so -- now so will
3 establish that a lot of economic research and
4 research on the economics of innovation and
5 innovation policy actually relies on that result in
6 order to be able to help write policy papers or come
7 up with policies, rather, that will be helpful for
8 expanding technology.

9 Q And on the slide here is -- where is some of the
10 research being done?

11 A Oh, well, this is -- I mentioned in my -- in my
12 report, Berkeley, of course, the Massachusetts
13 Institute of Technology, the University of Texas, Yel
14 University, are all important contributors to this.
15 In my deposition, the University of Pennsylvania,
16 work being done there also came up. But, you know,
17 the fact of the matter is these are just companies
18 that I ment -- or universities that I mentioned in my
19 report. It's basically being done in all research
20 centers where people are studying the economics of
21 innovation, and not just in the United States, but
22 also abroad, the University of Oxford, the Max Planck
23 Institute in Munich, the University of Singapore, the
24 Organization of Economic Cooperation and Development.
25 All of those places are doing this sort of work.

Dr. Cox - Direct

46

1 Q So is this correlation between the number of
2 times a patent is cited and the value of the patent,
3 is this accepted in the academic literature?

4 A Yes, it's widely accepted and published in the
5 peer-reviewed academic literature. And, again, in my
6 report I mentioned the RAND Journal -- a paper
7 published in the RAND Journal of Economics, which is
8 a very widely respected and highly respected journal
9 in economics. And I also mentioned the book
10 published by the Harvard University Press. But,
11 again, these were just two that happened to -- I
12 happened to cite in my report. There are tons of
13 reports or papers written on this topic. And, you
14 know, the last couple of years I've been able to
15 attend the annual meeting of the American Economics
16 Association, and both years, there were a lot of
17 papers where this methodology, or this relationship,
18 between value and the number of times a patent is
19 cited was either tested or was being relied upon for
20 other results.

21 Q Now, are there companies out there who value
22 patents?

23 A Yes, there are a lot of companies that
24 undertake -- will value patents for you. In fact,
25 NERA, my firm, does that as well.

Dr. Cox - Direct

47

1 Q And is NERA, your firm, and these other
2 companies, are they using this patent citation
3 analysis to value patents?

4 A Yes, it's widely used. I think -- I would say
5 almost all, if not all, major companies that are
6 doing patent valuation work are using citation
7 analysis.

8 Q Okay. So how do you use the patent citation
9 analysis in this case?

10 A Well, I had -- I did two things with the patent
11 citation analysis. One was just to get a general
12 sense of how valuable this patent was compared to
13 other patents issued at about the same time and in
14 the same technology area, and then I also looked at
15 the patent -- the value of the patent relative to the
16 other patents that were sold in the \$600,000
17 portfolio, the other U.S. patents that were sold in
18 the -- in the \$600,000 portfolio.

19 Q All right, let's -- you mentioned two concepts.
20 Let's just -- I'd like you to explain each to the
21 jury. Why do you want to look at patents that were
22 issued about the same time that the 870 patent was
23 issued?

24 A Well, you have to correct for when a patent is
25 issued because obviously the older a patent, the more

Dr. Cox - Direct

48

1 likely it is to be cited. A patent that was issued
2 just last year, in November say, is much less likely
3 to be cited than an equally valuable patent that was
4 issued ten years ago just because of the passage of
5 time.

6 Q And I think you also said something about the
7 same field of technology. Why do you want to compare
8 patents in the same field of technology?

9 A Well, it turns out that there are -- the patterns
10 of citation are different from technology to
11 technology, so I also correct for -- or normalize for
12 technology. You know, you don't want to compare a
13 pharmaceutical patent, for instance, with an
14 electronic patent.

15 Q All right. So what do -- what do you want to
16 compare the -- or how did you compare the 870 patent
17 to other patents from the same time, I think you
18 said, in the same field of technology?

19 A Well, I have an exhibit I think that would make
20 it easier to discuss. So, basically, what I start
21 off doing is I've got the -- I identify the patent,
22 which is shown here under column one, and that's the
23 870 patent, of course, that's at issue in this case.
24 And then I look at its publication date, which is
25 April of 2005. That is the date that the Patent

Dr. Cox - Direct

49

1 Office, the United States Patent Office, granted that
2 patent. And I also look at what I call the IPC
3 subclasses, which are the technology classes, or the
4 classes of technology, that the patent examiner
5 determines this patent belongs to. And the patent
6 can be in more than one technology. So in this case
7 the patent examiner placed the 870 patent in
8 something called the H04L and the H04W. H04L I
9 believe has something to do with error correction and
10 data transmission, and H04W has to do with cellular
11 networks.

12 Q All right. So what's in -- and what's in the
13 next column then?

14 A So then what I do is I look for all the patents
15 in those two IPC subclasses, or technology
16 subclasses. I find -- I identify every patent that
17 was issued between -- well, to put it simply, in the
18 year bracketing the April 26, 2005, date. So I go
19 back to whatever that is, November of 2004 through
20 November of 2005, to get and identify all the patents
21 that were issued in that one year period around the
22 publication date of the 870.

23 Q And how many patents did you find?

24 A 7,928 patents were issued in that time period in
25 those two subclasses.

Dr. Cox - Direct

50

1 Q Okay. So what did you do next then?

2 A So, basically, what I then did is I compared how
3 many times the people -- the 870 patent was cited
4 compared to all the other patents in that subclass
5 issued about the same time. So what this says, what
6 that number four says, in column five, says that the
7 870 patent was cited four times in -- by four later
8 patents.

9 Q And what is the next -- what's the median for
10 citations?

11 A Well, that compares to -- that number four
12 compares to the median number, which is 12. What the
13 median patent is -- in this context is is the patent
14 that has the number -- a number of citations such
15 that half the patents have more citations and half
16 the patents have less citations. So there are about
17 8,000 patents we identified. What the median means
18 is that there are 4,000 patents that are cited more
19 often than that -- than the median patent and 4,000
20 patents that are cited less often than the median
21 patent. So it's a -- it's an indication of the
22 midpoint basically. It's the 50th percentile.

23 Q So how does the eight --

24 A Well, let me just finish my analogy --

25 Q Sure.

Dr. Cox - Direct

51

1 A -- a little bit just to -- the median would be as
2 though you took all the kids in a grade ten class and
3 sorted them by height, made them stand against the
4 wall by height. The median height child would be the
5 one who had -- if there are 20 kids in the class --
6 well, let's make it 21 just to make it easier -- 21
7 kids in the class, the median height kid would be the
8 one that had ten children who are taller than he or
9 she was and ten children who are shorter than he or
10 she was.

11 Q Okay. So how does -- you said the 870 was cited
12 by four later patents?

13 A Yes.

14 Q So how does the 870 patent compare to other
15 patents that were issued in the same technology area
16 within the same year?

17 A It's not very -- it's not doing very well
18 compared to other patents that were issued at the
19 same time. It was only cited four times. Only four
20 later patents between the date that it was issued and
21 the date that I wrote my report had ever cited this
22 patent, compared to the median, that is just the
23 middling -- midpoint of patents, it was cited 12
24 times -- cited 12 times.

25 Q What does the number 25 there mean?

1 A Well, that's another indication of the relative
2 number of times this patent has been cited. What it
3 indicates is that this patent belongs to the bottom
4 quarter of the distribution of value, or certainly
5 the bottom quarter of the distribution of the number
6 of times it was cited, so not apparently a very
7 important patent.

8 Q All right. So you mentioned a second analysis
9 that you undertook using this patent citation
10 analysis. And I think you said you were comparing it
11 to the other two U.S. patents that Nokia sold to
12 Comcast, is that correct?

13 A Yes, that's right.

14 Q Okay. And I think you also made a slide for
15 that?

16 A Yes, I did.

17 Q So could you explain, again, just walk quickly
18 through?

19 A Sure. So, basically, what this slide shows is
20 exactly the same analysis for the 870 patent, but
21 also looked at the 323 patent and the 026 patents,
22 which were also sold in the same transaction. And,
23 basically, I just go through the same thing. I
24 identify the date that the patent was issued, I
25 identify the subclasses that the patent office placed

Dr. Cox - Direct

53

1 this patent in. In the case of the 323, there's only
2 one. I then look at the categorically similar
3 patents, what I call the categorically similar
4 patents, that is the ones that were issued in the --
5 either within six months before or six months after
6 the issue date. You can see, for instance, that the
7 026 patent had 15,297 patents that fit that criteria
8 issued around that time. And then I looked at the
9 number of forward citations that those patents
10 received, that is the number of times -- the number
11 of patents that cited the patents that are in the
12 highlighted column one, and that shows that the 323
13 patent was cited 190 times and the 026 patent was
14 cited 73 times.

15 Now, the fact that the 1999 patent is cited
16 more often is not surprising because it's much older.
17 But before we do anymore analysis, you can see that
18 the bottom patent there, the 026 patent, was issued
19 at about the same time as the -- as the 870 patent,
20 and yet it received 73 citations.

21 Q So do you get into a valuation?

22 A Yeah, so we have to normalize for date. So what
23 I've done is, again, I compared the number of times
24 that the patent was actually cited with the number --
25 the median number of times the patent -- the median

Dr. Cox - Direct

54

1 number of times that the categorically similar
2 patents were cited. So, you know, this is dealing
3 with the equivalent of the 12 we saw in the previous
4 slide in column six. The median numbers are 31 and
5 ten, 31 citations for the older -- median -- 31 is
6 the median number of citations for the categorically
7 similar patents that were issued about the same time
8 as the older patent. The younger patent has about
9 ten citations.

10 Q So based on that, if you look at the last column,
11 is -- are you saying that the -- based on your patent
12 citation analysis, that the 870 would represent 2.4
13 percent of the \$600,000 in the Nokia-Comcast
14 transaction?

15 A Right. That is basically the bottom line. It's
16 obviously worth a lot less than the other two patents
17 because the number of forward citations of the other
18 two patents is much greater than the median number of
19 citations in those technology classes.

20 Q So how does this method -- this patent citations
21 analysis method of comparing the value, how does that
22 compare to what Ms. Riley did?

23 A Well, what this does -- this -- how -- the
24 problem with Ms. Riley's methodology is that there's
25 no -- she doesn't provide any basis for why her

Dr. Cox - Direct

55

1 counting up the number of steps and the correlation
2 of -- and the proportion of steps that are used
3 indicate the value of the patented technology.
4 There's no -- as far as I know, no credible peer-
5 reviewed literature that describes that as being the
6 basis of the valuation, there's no basis for
7 suggesting that just because something is used a
8 certain number of steps is a basis for the value of a
9 patent. This, on the other hand, is based on
10 rigorous, peer-reviewed analysis that indicates that
11 the patent at issue here should not be given that
12 much value.

13 Q All right. So let's talk -- let's turn to Ms.
14 Riley's opinion. What is your assessment of the
15 opinion submitted by Ms. Riley?

16 A I don't think that her methodology can be relied
17 on -- should be relied upon as the basis for
18 calculating a reasonable royalty in this matter.

19 Q Why not?

20 A Well, for several reasons. First of all, she
21 relies heavily on revenue numbers that are
22 unreliable. She doesn't accurately calculate the
23 costs of the -- that are used in providing messaging
24 services. And, finally, the methodology, as I said,
25 is an unreliable one and shouldn't be utilized in a

Dr. Cox - Direct

56

1 matter such as this.

2 Q All right. So you just mentioned I think what,
3 revenue, cost, and --

4 A The methodology itself.

5 Q -- and the methodology? All right. So -- and
6 didn't she use something I think she called the
7 income approach?

8 A Yes.

9 Q So why is her income approach not appropriate for
10 the revenues in this case?

11 A Well, for two of the reasons I just stated. One
12 is that -- one reason is that she can't make an
13 accurate estimate of the revenues, and the other
14 reason is because you can't -- doesn't use an
15 accurate estimate of the cost involved.

16 Q And why can't she make an accurate estimate of
17 the revenues?

18 A Because Sprint basically does not separately
19 track the revenue that it can attribute to its
20 messaging services. It doesn't track it and it's not
21 possible to track the revenue that it receives from
22 its messaging services.

23 Q All right. And why doesn't -- why doesn't Sprint
24 know how much revenue is attributable to SMS and MMS?

25 A Well, like other companies in this -- providing

Dr. Cox - Direct

57

1 cellular network services, it is now providing these
2 services in a bundle. Basically, companies are
3 offering individual customers bundles of services for
4 a single price. For a single price, you get to use
5 voice, data, and messaging. And not only do
6 individuals get to do this, but you now can do it
7 across families. So it's impossible to determine
8 what part of the bundled revenue is attributable to
9 messaging.

10 Q Now, what about -- I think you mentioned cost.
11 What is your opinion about --

12 A Actually, I didn't quite finish that. And this
13 is a situation that -- not just my opinion about the
14 ability to determine what the revenue is, but, in
15 fact, recently, the Federal Communication
16 Commission -- not that recently, but the Federal
17 Communication Commission now has determined that it
18 can't determine how much -- the value, basically, of
19 messaging in the United States because all of the
20 major operators are providing these bundled services,
21 and nobody actually knows how much revenue is
22 attributable to messaging.

23 Q Okay. I think the second thing you had mentioned
24 was cost. What is your opinion about Ms. Riley's
25 estimate of cost?

Dr. Cox - Direct

58

1 A Well, you're going to hear more from that --
2 about that from Dr. Dippon, who is more of an expert
3 on this than I am. But my understanding is that Ms.
4 Riley did not include all the costs in the -- that
5 are necessary to provide messaging services, and, in
6 particular, she didn't provide or include any cost
7 for the spectrum, which is one of the most costly
8 portions of the provision of cellular services.

9 Q Do you know if Ms. Riley included network costs?

10 A I know that there are many elements of network
11 costs that she did not include.

12 Q And do you recall -- and I think we have it
13 here -- do you recall Ms. Riley's slide on the -- on
14 the bus?

15 A Yeah, I do.

16 Q And I think she was talking about this being a
17 free rider issue. Do you have an issue with her
18 analogy here?

19 A Well, I do. My problem with this is that it
20 indicates what the situation may have been at the
21 time of the hypothetical negotiation. You asked me
22 earlier about the difference between the use of
23 messaging in 2005 versus 2010, and now a few years
24 later, we know that messaging has grown even more.
25 So, in fact, when somebody is sitting down -- when

Dr. Cox - Direct

59

1 Sprint is sitting down thinking about what it's going
2 to need in order -- in terms of capacity it's going
3 to think about the fact that the number -- the amount
4 of messaging is going to increase from a factor of 18
5 or 20 or 25. And so rather -- by the time -- with
6 the fullness of time, as more and more messaging is
7 being done, more and more of these bundles that Ms.
8 Riley had traveling in these buses would fill up
9 those buses or fill up the cargo space in these buses
10 and you would need to have more buses in order to
11 carry those bundles. And once that happened, then
12 you would start having congestion and you would have
13 to either cause more -- move more buses onto the
14 lanes, which are already crowded, or you're going to
15 have to build more capacity. And that's something
16 that needs to be taken into account when thinking
17 about the relative profitability of messaging. What
18 are going to be your future costs, expansion costs,
19 when you're in -- providing messaging services?

20 Q Okay. So we've talked about revenue, we've
21 talked about cost. I believe Ms. Riley also used a
22 methodology she called excess profits. Do you have
23 an opinion of her use of this excess profits
24 methodology?

25 A Yes, I do. I think it's totally inappropriate in

Dr. Cox - Direct

60

1 a situation like that. I mean recall that what she
2 did was she took her estimate of the margin earned on
3 messaging, which I've already discussed I have some
4 problems with, and then she compared that to she said
5 was Sprint's normal profits on everything else that
6 Sprint provides.

7 The basic problem with that is that the
8 excess profits, and, therefore, her valuation of the
9 patents, are going to vary depending on the services
10 that Sprint offers. They're going to go up and down.
11 Sprint's normal profit is going to go up and down
12 depending on what services Sprint offers and where it
13 offers them. So in other words, her excess profits
14 are going to change for reasons that have nothing to
15 do with the value of providing messaging services.

16 It also has other bizarre results, like the
17 one I pointed out in my report, which is the fact
18 that if you look at SMS profitability the way she
19 calculates and MMS profitability the way she
20 calculates it, and compares each of those to the
21 so-called normal profit, it turns out that MMS is
22 less profitable than normal profits. So that means,
23 taking her logic to the next step, that the patented
24 technology has negative value as applied to MMS.
25 Well, that can't be right because, you know, Sprint

Dr. Cox - Direct

61

1 is certainly earning some revenue from MMS and there
2 must be some value to the provision of that service
3 to Sprint. And, therefore, you know, using the
4 excess methodology gives a result that is obviously
5 totally perverse.

6 Q Is it -- on this excess profits thing, is it --
7 do you think it's acceptable to compare the profits
8 of messaging without the cost of spectrum and other
9 things like that to the average cost, which would
10 include spectrum?

11 A Well, that's another excellent point is that, you
12 know, you have to make sure that you calculate the
13 margins in exactly the same way in order for you to
14 be able to use -- compare the margins on messaging
15 with the margins on everything else. And Sprint's
16 normal profits, as she calculated them, include a lot
17 more elements that she excluded from the cost of
18 messaging.

19 Q All right. So after she did this excess profit
20 analysis, she then I think applied Dr. Akl's step
21 counting?

22 A Yes.

23 Q Do you have an opinion about her use of this step
24 counting methodology?

25 A Yes, I think it's not correct and it doesn't make

Dr. Cox - Direct

62

1 common sense even. That valuation should be based on
2 the basis of frequency of use.

3 Q And do you have any specific problems -- even if
4 you could use the step counting methodology, do you
5 have any specific problems with the way she did so?

6 A Well, yes. I mean part of the problem with this
7 whole step -- the step methodology is that, first of
8 all, there's ambiguity as to what the number of steps
9 are and professor -- or Dr. Akl testified that he did
10 not include all the steps that Ms. Riley relied --
11 did not include all the steps in getting a message --
12 or switching a message and providing messaging
13 services, so Ms. Riley's number has to be wrong.
14 But, more importantly, even if it was correct to
15 count steps and even if the number of steps was
16 correct, Ms. Riley takes no account of any other
17 things that would be going on, any other factors that
18 would be involved in taking a particular step. So if
19 a particular step is taken using a \$500,000 piece of
20 equipment and involves five or six other patents, Ms.
21 Riley doesn't take that into account at all. She
22 doesn't have any difference in the -- it doesn't
23 provide any weighting for any other technology or any
24 other input that would be used in implementing every
25 step.

Dr. Cox - Direct

63

1 Q All right. Ms. Riley said she used the income
2 method because that measured the value of Sprint's
3 use of the patent. You would agree -- do you agree
4 that that's a proper way to measure it?

5 A No, I don't.

6 Q Okay. Can you give me an example?

7 A Well, the frequency of use, as an indicator of
8 value, to give a common sense analysis as to -- or
9 description as to why it's not appropriate, think
10 about a patent on a tire. You know, the -- a tire on
11 a car, when it's attached to a car, is used 100
12 percent of the time that you're driving the car. But
13 that doesn't mean that the entire profit of the car
14 should be associated with that one patent. No,
15 you've got to make some allocation of the patent to
16 all the other intellectual property and all the other
17 engineering and all the other know-how and all the
18 other manufacturing costs that go into make the car.
19 You can't just attribute the entire profit of selling
20 a car to the tires because they're always used.

21 Q So then how would you determine the value of the
22 tire in that instance?

23 A Well, that's the beauty of markets. You know, we
24 know how much a tire costs because we can go out and
25 buy one, and we know we wouldn't pay anything more

Dr. Cox - Direct

64

1 than what we could buy a tire for than we might when
2 we go down to Big O Tires. Markets allow us to make
3 the allocation between, you know, what in this case
4 the patent is actually worth and the overall
5 profitability, if you could calculate it, of
6 messaging.

7 Q Okay. Did Ms. Riley -- did Ms. Riley take into
8 account the Nokia-Comcast transaction?

9 (Pause in proceedings.)

10 A No, she refused to take it into account.

11 Q All right. I think one of the things that Ms.
12 Riley testified about was Nokia's changed
13 circumstances. I think she calls it Nokia's demise.
14 Can you just repeat what you understand her -- she
15 was talking about there?

16 A Well, yeah, she basically said, as I understand
17 it, that Nokia was in a different financial situation
18 in 2010 than it was in 2005, that it had a different
19 patent strategy and a different strategy overall, and
20 that because of those situations, Nokia would have
21 been willing to take a discount or sell the patent
22 for a lower price.

23 Q Now, do you think this would have had any impact
24 on the price Nokia would have been willing to sell
25 that patent for?

Dr. Cox - Direct

65

1 A No, I don't think so at all. First of all, Nokia
2 was still doing very well. It had earnings I think
3 of 2.1 million -- billion Euros at about -- in about
4 2010. But second of all, even if it was doing
5 relatively badly, it was certainly not in desperate
6 straits, so it could sell in an orderly manner. And
7 it had a fiduciary responsibility to its shareholders
8 to get the best price it could. It had a fiduciary
9 responsibility -- an obligation to the shareholders
10 to get a price that reflected the value of the
11 patent.

12 Q Okay. What is your understanding of Nokia's
13 financial position today?

14 A Nokia now has -- for the last year data is
15 available, 2015, I think it had earnings of 1.7
16 million -- sorry, 1.7 billion Euros and was earning a
17 margin of about 13.5 percent. And it had a very
18 strong balance sheet still, I think in the 20 billion
19 Euro area. So it's still a very strong company and
20 was a strong company in 2010, led by people who are
21 very savvy about how they want to manage their
22 intellectual property, and not the sort of people who
23 are going to sell it at any sort of a discount.

24 Q Are you aware of any recent acquisitions Nokia
25 made?

Dr. Cox - Direct

66

1 A Yeah, I understand that in the last year or two
2 they bought Alcatel-Lucent, which is a major European
3 technology company.

4 Q Now, what about Ms. Riley's opinion that Nokia
5 wanted to monetize its patent portfolio? Do you have
6 an opinion about that?

7 A Well, you know, it may have wanted to monetize
8 its patent portfolio, but what does that mean? That
9 means you want to get -- you want to sell -- you want
10 to get money for it and it means you want to get the
11 best price you possibly can. So, again, I think that
12 it would mean that the price that Nokia got for its
13 patent in 2010 would be reflective of the -- of
14 market price for that patent.

15 Q I think one of the other things you said earlier
16 in your testimony is that Ms. Riley overstated the
17 value of the 870 patent. If Ms. Riley's valuation is
18 correct, what would the effect of this be on the
19 entire industry?

20 A Well, I think one way of thinking about that is
21 to scale up what Ms. Riley is implying about the
22 value of the patent. So if the patent is worth \$150
23 million to Sprint, and Sprint represents only
24 one-seventh of all the companies that could use this
25 patent, then that means that this patent, according

Dr. Cox - Direct

67

1 to Ms. Riley, when applied to all the
2 manufacturers -- all the providers of cellular
3 service, that this patent is worth \$1.7 billion.
4 Well, one thing that you have to wonder about is why
5 would Nokia cell for \$600,000 a patent, in
6 combination of other patents, which, presumably, have
7 value -- why would it sell that patent for \$600,000
8 when the patent is actually worth something like
9 2,500 or 5,000 times more than that, you know,
10 something closer to \$1.7 billion? It just doesn't
11 make sense. And, as I implied earlier with my other
12 quest -- with the answer earlier where I was talking
13 about the large numbers that Ms. Riley is talking
14 about here, you know, if we act -- if companies have
15 to pay royalties of that size for just one patent of
16 the -- and you scale that up to the tens of thousands
17 of patents that are involved in providing cellular
18 network services, the number would be truly
19 astronomical.

20 Q All right. Did you attempt to make any
21 corrections to what you believe are Ms. Riley's
22 errors in her calculations?

23 A Yeah, I did do some adjustments to some of her
24 calculations to come up with more reasonable numbers,
25 though I still didn't -- don't accept the methodology

Dr. Cox - Direct

68

1 as being appropriate.

2 Q And is this -- what's on the screen now, is this
3 the schedule from your report in which you tried to
4 do this?

5 A Yes, it is. And you can see in the bottom of
6 column two, which is highlighted here, actually,
7 blown up here, I estimated total damages just based
8 on her methodology of \$67,000.

9 Q Okay. Two more topics. Did you read the
10 transcript of Ms. Riley's testimony from Monday?

11 A I did.

12 Q And do you recall that she mentioned a report
13 that was published by J.P. Morgan I believe?

14 A Yes, I did.

15 Q Have you reviewed these reports?

16 A Yes, I have.

17 Q Are they cost analyst studies that would be done
18 by trained economists?

19 A No, they're not.

20 Q And do the people who did these studies, did they
21 have access to the internal Sprint financial
22 information that you and Ms. Riley had in this case?

23 A No, they didn't.

24 Q And the FCC report, that was only referenced --
25 that only referenced the Morgan Stanley report, is

Dr. Cox - Direct

69

1 that right?

2 A That's correct, yeah.

3 Q And what did the Morgan Stanley report identify
4 as the three primary services offered by cellular
5 networks?

6 A Voice, data, and messaging.

7 Q All right. One more quick topic here. Ms. Riley
8 has said that the reasonable royalty should be in the
9 form of a running royalty. Do you agree?

10 A No, I don't.

11 Q And what do you think the form of the reasonable
12 royalty should be?

13 A Well, I think in keeping with business -- or
14 business practice in this industry, for this sort of
15 service a -- the royalty should be in the form of a
16 lump sum payment, that is Sprint would have agreed at
17 the hypothetical negotiation to pay the \$1.5 million
18 in a single payment which would cover its right to
19 use the technology for the remainder of the life of
20 the patent.

21 Q And have you looked at agreements in this case?

22 A Yes, I have. I've looked at agreements in this
23 case and many other licenses as well.

24 Q And what does reviewing those agreements indicate
25 to you? Should it be a lump sum or a running

Dr. Cox - Direct

70

1 royalty?

2 A It should be a lump sum, based on my experience
3 looking at other licenses, and there's good reasons
4 for that. It's very difficult to account for all the
5 transactions. There's a lot of accounting and
6 reviewing work that has to be done in order be able
7 to calculate the royalty that is owed, the amount of
8 money that's owed at the end of every year, based on
9 trying to track trillions of -- trillions of
10 transactions and trillions of messages.

11 Q Okay. Could you just summarize for the jury what
12 your opinions are in this case?

13 A Yeah, I'll just go back to the slide I had closer
14 to the opening. That if the patent is infringed and
15 valid, if you make that finding, then the facts in
16 this case indicate that a reasonable royalty would be
17 a lump sum payment of \$1.5 million. And Ms. Riley's
18 methodology I found to be unreliable. It's the wrong
19 approach and she did ignore many important facts and
20 comes up with an unreasonably large number.

21 Q Dr. Cox, thank you for your time. Please answer
22 Mr. Heist's questions.

23 A Certainly.

24 THE COURT: I think we'll --

25 MR. HEIST: Sorry, Your Honor.

Dr. Cox - Direct

71

1 THE COURT: I was going to say it's 11:17.
2 I think we ought to have a quick recess.

3 (Jury out, 11:16 a.m.)

4 THE COURT: Be seated, everyone. You may
5 step down, Dr. Cox.

6 THE WITNESS: Thank you.

7 THE COURT: What time is your --

8 MR. RIOPELLE: My --

9 THE COURT: -- absolute --

10 MR. RIOPELLE: 12:00.

11 THE COURT: -- latest?

12 MR. RIOPELLE: 12:00.

13 THE COURT: 12:00?

14 MR. RIOPELLE: My flight that I was going
15 to take at 2:15 has already been delayed, so I
16 canceled the flight and I have a car meeting me out
17 front at 12:00, which I believe will get me to the
18 visitation about a half an hour after it starts,
19 assuming that there's no --

20 THE COURT: You're going to drive to
21 Virginia.

22 MR. RIOPELLE: Yeah.

23 THE COURT: How long do you think the cross
24 will be.

25 MR. HEIST: I would estimate an hour, Your

1 Honor. I apologize for that because I'd --

2 THE COURT: No, no need to.

3 MR. HEIST: -- rather not have it mulled
4 over, but I don't think I could finish. I will do my
5 very best to move along and go as far as I can. If I
6 can finish, I will.

7 THE COURT: Well, I thought I had to give
8 the jury a short break. They've been at it since
9 about 9:45. Let's stick to the ten minutes. Let's
10 make it a little shorter than that. And --

11 MR. RIOPELLE: Thank you, Your Honor.
12 Again, thank you for your kindness of dealing with my
13 situation.

14 THE COURT: Are we going to be able to
15 address the lump sum versus running royalty issue in
16 your absence?

17 MR. FINKELSON: We are, Your Honor.

18 THE COURT: Okay.

19 MR. RIOPELLE: He's not just a technical
20 guy.

21 THE COURT: Well, we'll see. How about
22 seven minutes then?

23 (Recess taken from 11:18 a.m. to 11:26
24 a.m.)

25 THE COURT: Be seated, everyone. You may

Dr. Cox - Cross

73

1 proceed with cross-examination.

2 MR. HEIST: Thank you, Your Honor.

3 CROSS-EXAMINATION

4 BY MR. HEIST:

5 Q Good morning, Dr. Cox.

6 A Good morning, Mr. Heist. How are you?

7 Q Good. Now, you are an economist, right?

8 A Yes.

9 Q And you're not testifying here as a technical
10 expert?

11 A That's correct.

12 Q And you're not a patent lawyer?

13 A That's correct.

14 Q And you're not testifying as a legal expert or a
15 patent expert?

16 A That's correct.

17 Q And you're not an accountant?

18 A That's correct.

19 Q I think we may get into some issues involving
20 accounting, engineering, and law in your cross-
21 examination. I just want to establish that. Now, in
22 giving your opinion, you assumed -- and I know it was
23 an assumption just for the purpose of your
24 testimony -- but you assumed that the 870 patent is
25 valid and has been infringed by Sprint?

Dr. Cox - Cross

74

1 A Yeah, that's the simplifying assumption that we
2 make in order to be able to even come up with a
3 damage number.

4 Q Right. And you're not -- you're not giving an
5 opinion on the underlying issues, but everything you
6 said about your opinion starts with the assumption
7 that the patent is valid and has been infringed?

8 A That's correct.

9 Q Now, if the jury decides that Sprint has
10 infringed even one claim of the patent and that that
11 one claim is not invalid, as Sprint alleges, then
12 damages must be awarded, correct?

13 A Yes, appropriate damages should -- I suppose must
14 be awarded, yes.

15 Q And the measure of damages that must be awarded
16 is an amount of money that would compensate Comcast
17 for Sprint's infringement?

18 A That's what the law says, yes, and that's
19 consistent with the number that I suggested.

20 MR. HEIST: And just to remind ourselves of
21 what we looked at in Ms. Riley's testimony regarding
22 the law that the Court will instruct all of us on,
23 could we please have Ms. Riley's slide PD4.6?

24 BY MR. HEIST:

25 Q "The damages you award must be adequate to

1 compensate Comcast for the infringement." Do you see
2 that?

3 A Yeah, and it's consistent with the number that I
4 suggested.

5 Q And then it says, "Comcast is entitled to recover
6 no less than a reasonable royalty for each infringing
7 act." Do you see that?

8 A Yes.

9 Q And you understand that that's our task?

10 A That's correct. That's consistent with the
11 number that I suggested and the lump sum royalty I
12 suggested.

13 Q Now, the damage award in a patent case can be
14 higher than a reasonable royalty in some instances,
15 can it not?

16 A Well, not just for the -- not just for the
17 compensatory -- not for just the compensation part of
18 the award, no, not in --

19 Q Could --

20 A -- my understanding.

21 Q In some cases the damage awards are higher than a
22 reasonable royalty, but the royalty establishes a
23 floor, does it not, beneath which damages may not
24 fall?

25 A In a reasonable royalty case or in -- are you

1 talking about loss profits cases?

2 Q My point is that reasonable royalty is the
3 bottom. Damages cannot go below a reasonable royalty
4 in a patent case if infringement and validity is
5 found?

6 A I'm just trying to think of whether in lost
7 profit cases it's possible to get a reasonable
8 royalty that's higher than the lost profit, but I
9 think as a general matter, I can accept that.

10 Q And the patent statute itself, which I think we
11 looked at at your deposition last year, says that,
12 "Damages can be no less than a reasonable royalty for
13 the use made of the invention by the infringer,"
14 correct?

15 A That's correct, and that's consistent with my --
16 what I was doing in this case.

17 MR. HEIST: And can we see Ms. Riley's
18 slide PD4.8?

19 BY MR. HEIST:

20 Q And, again, that's from the instructions that we
21 will receive, I expect, from the Court, and it uses
22 that language right out of the statute that says, "A
23 reasonable royalty is defined as the amount of money
24 Nokia and Sprint would have agreed to -- agreed upon
25 as a fee for the -- for use of the invention."

Dr. Cox - Cross

77

1 That's what we're trying to get at here, a royalty
2 for the use of the invention, correct?

3 A That's right. That's right. We're looking at the
4 royalty, appropriate royalty, for a single patent in
5 a complex cellular network system, that's correct.

6 Q And you were here when Ms. Riley testified I
7 believe, were you not?

8 A I was here for the Friday testimony. I was not
9 able to be here on Monday.

10 Q And she referred to the Georgia-Pacific factors,
11 which are factors from a famous patent case that has
12 been quoted and cited again and again over the years,
13 correct?

14 A Yes.

15 Q And one of the factors that she mentioned that
16 she looked at was the factor, and I'm going to quote
17 it, "the extent of use by the infringer and evidence
18 probative of the value of that use?"

19 A Yes, that's right.

20 Q Okay.

21 A The value of that use.

22 Q Right. So we have to look at the extent of use
23 by the patent by Sprint?

24 A We have to look at the value of the extent of use
25 of that patent, not just the number of times it's

1 used.

2 Q Now, just to get a few preliminary matters out of
3 the way, you agree Comcast owns the patent?

4 A As of today, that's my understanding, yes.

5 Q And they acquired it from Nokia in 2010?

6 A Yes.

7 Q And when they acquired the patent from Nokia in
8 2010 Comcast acquired the right to collect damages
9 that arose when Nokia owned the patent, correct?

10 A That's correct. They could assert that patent
11 against everybody in the United States who they felt
12 was infringing that patent.

13 Q Or they also had the right, did they not, to
14 cross-license the patent with others?

15 A That's correct too, though that would be based --
16 that cross-licensing would be based on the value of
17 the patent.

18 Q Understand. Now let's talk about the damage
19 period. If the jury finds infringement of a valid
20 claim in this case, Comcast is entitled to damages
21 running from February 17th, 2006, through -- in
22 Comcast's claim, through September 30th of last year,
23 correct?

24 A That -- certainly the start date is consistent to
25 my understanding, and if -- to the extent that they

Dr. Cox - Cross

79

1 are still infringing, they would be entitled to the
2 royalty calculated through that time period.

3 Q So --

4 A Though, again, I'd say that an appropriate damage
5 calculation would be a lump sum payment.

6 Q For the life of the patent?

7 A That's correct.

8 Q Could we call that a "paid up license?"

9 A Could we call it that?

10 Q Yeah, would your -- let's -- I think there may be
11 some confusion here and I think it's worth trying to
12 untangle it. Your view is that the appropriate
13 reasonable royalty in this case is \$1.5 million paid
14 up license for any and all use of the invention of
15 the 870 patent that took place between February of
16 2006 up through the date the patent expires?

17 A Yes, that would be my estimate. The use would
18 be -- I guess there would probably be some
19 restriction to the uses that have actually been made
20 by Sprint of the -- of the patent.

21 Q But just so we're all clear, you're seeking --
22 your opinion would seek compensation for acts that
23 haven't even occurred yet?

24 A Yeah, it's -- that's a common feature of
25 technology licenses for the provision of wireless

Dr. Cox - Cross

80

1 services, and that -- what I'm suggesting is in
2 keeping with that common practice.

3 Q Okay. So the last year for which we have
4 information from Sprint, there were 330 million
5 messages, approximately, SMS and MMS messages, that
6 were sent and delivered by Sprint. Just accept my
7 number for just a moment, if you would.

8 A Okay.

9 Q The patent doesn't expire until 2023. Are you
10 aware of that?

11 A Yes.

12 Q And so let's just call that six years from now.
13 So your opinion is that the measure of damages should
14 be \$1.5 million for the 2.66 trillion messages that
15 have already been sent and delivered, and what could
16 be as many as 2 trillion messages that have yet to be
17 sent and delivered before the patent expires, is that
18 right?

19 A Well, that's right, but it could go the other way
20 around too. I mean Sprint's messaging could continue
21 to be threatened by the over-the-top messaging and it
22 might go down considerably --

23 Q Right, the --

24 A -- so the risk is all on Sprint.

25 Q The -- no one can tell for sure what the future

Dr. Cox - Cross

81

1 will hold, but your opinion is that the value that
2 you're seeking as a reasonable royalty is paid up for
3 the life of the patent for everything that's happened
4 in the damage period so far and everything that might
5 happen until the patent expires more than six years
6 from today?

7 A Right, but you got to remember, we got to put
8 ourselves back at the time of the hypothetical
9 negotiation. At that time what was going to happen
10 in the future was not known with certainty, and
11 there's always a possibility that, as I said, other
12 technologies would come in and threaten the revenue
13 stream to the extent that you could associate one
14 with text -- with messaging. It would threaten that
15 revenue stream and eliminate messaging through the --
16 through the system. And in that case, Sprint would
17 have been out \$1.5 million for using a technology --
18 for a tech -- for the right to use a technology that
19 it never got a chance to use.

20 Q No one's crystal ball is perfect.

21 A That's correct, but -- and that's one thing that
22 has to be taken into account when calculating a
23 reasonable royalty.

24 Q But just taking the two parties' damage experts'
25 theories and putting them next to one another, we're

1 not really comparing apples to apples in one sense
2 because Ms. Riley's number only seeks compensation
3 through September 30th of last year. Your number
4 would be compensation for infringement that might or
5 might not occur in the future between now and the
6 time the patent expires? I just want to make that
7 point. Is that correct?

8 A Well, it's not quite as different as that. I
9 mean her payment, her royalty, could be turned into a
10 lump sum by doing a discounted present value back to
11 2005. But apart from that -- we could turn the
12 apples into apples except for the fact that there's
13 still some potential for ongoing infringement of the
14 patent if it's valid.

15 Q And that potential -- if we take the last year
16 for which we have information, that potential could
17 be another 2 trillion messages?

18 A Sure, of which this patent, if it's valid,
19 provides a very small component of the technology
20 that's necessary to do that, a minuscule portion of
21 the technology.

22 Q All right. Ms. Riley says that to determine a
23 reasonable royalty, one must consider a hypothetical
24 negotiation between a willing a licensor and a
25 willing licensee that would have taken place on the

Dr. Cox - Cross

83

1 date of first infringement. You agree with that?

2 A I do, yes.

3 Q And she says that on the facts of this case, that
4 negotiation would have taken place on April 26th,
5 2005, the day the patent issued?

6 A Yes.

7 Q And you agree with that?

8 A Yes.

9 Q And she said at that time Nokia owned the patent,
10 and so the negotiation would have been between Nokia
11 and Sprint, and you agree with that?

12 A Yes, I do.

13 Q And she said at that negotiation, the
14 hypothetical negotiation, both parties, Nokia and
15 Sprint, would have come into the room with the
16 understanding that the patent was valid and that the
17 patent was infringed by Sprint.

18 A That's correct, I've acknowledged all of those
19 points.

20 Q And in that respect, the hypothetical negotiation
21 differs from any real world negotiation which -- with
22 which you are familiar, correct?

23 A That's correct. Those are -- those are the only
24 differences, and as I said in my direct testimony,
25 that's a set of simplifying assumptions that we use

1 so that we can come to some number, so we can
2 calculate and determine how the hypothetical
3 negotiation would have ended up, but it still has got
4 to be a realistic royalty.

5 Q I understand that, but the law requires us to
6 start with these simplifying instructions that don't
7 really happen in the real world, correct?

8 A That's correct. That's one of the things we have
9 to correct for when we're using comparables.

10 Q And the hypothetical negotiation, at that
11 negotiation, the parties must be presumed to have
12 knowledge about what turned out to be the extent of
13 infringement over the damage period, correct?

14 A Well, maybe you can elaborate on that because I'm
15 not sure that I agree with that.

16 Q Well, at the time of the hypothetical
17 negotiation, the parties -- let's start with -- let's
18 start with what they would have known on the date of
19 hypothetical negotiation, and look -- let's look at
20 some real world facts that they would have brought
21 into the room with them, okay?

22 A Okay.

23 Q Now, just before the hypothetical negotiation in
24 2004, Sprint began providing two-way text messaging,
25 correct?

1 A Yes.

2 Q SMS?

3 A Yes.

4 Q And around that time was the beginning of
5 inter-carrier interoperability, correct?

6 A That's correct.

7 Q And that means that a Sprint subscriber could
8 text an AT&T subscriber or Verizon subscriber and
9 vice versa?

10 A That's correct.

11 Q And just about that time inter-carrier
12 interoperability had also just been extended to MMS
13 messages as well?

14 A I'll except that.

15 Q And the introduction of inter-carrier
16 interoperability was stimulating growth in text
17 messaging, correct?

18 A Yeah, I agree that there are a lot of other
19 factors that contributed to the SMS -- the success of
20 SMS to the extent that it's been successful, and
21 that's one of my problems with Ms. Riley's analysis.
22 She doesn't take into account all of the other
23 factors that contributed to the success of the SMS
24 technology. This is a great point. You know, this
25 is something that was worked out by engineers, as

Dr. Cox - Cross

86

1 we've heard before, and it came -- is the result of
2 agreements that were worked at through many man hours
3 and person hours of engineering work that had to
4 be -- has to be taken into account in terms of -- in
5 calculating the value of this particular patent,
6 which, as I said, seems to be a relatively minor
7 component of all the things -- all the things that
8 had to happen for SMS to be successful, not just this
9 agreement, but also the fact that you can -- you have
10 more efficient keyboards now and better screens and
11 all the other things that have facilitated the
12 expansion of SMS.

13 Q Thank you for that explanation. My question,
14 however, was introduction of inter-carrier
15 interoperability was stimulating growth in text
16 messaging at the time of the hypothetical
17 negotiation, correct?

18 A That's correct, quite independent of the
19 ability -- of the presence of this patent.

20 Q I'm not asking you about the patent. I'm asking
21 you what the parties understood when they walked into
22 that room. And they walked into that room knowing,
23 did they not, that inter-carrier operability was just
24 coming on the scene and that it was stimulating the
25 growth in the number of messages --

1 A Right, but --

2 Q -- before they even mentioned the patent?

3 A They didn't -- that's right, but they didn't know
4 how much it was going to be stimulating, they didn't
5 know how many complementary factors would be
6 available to continue the growth of SMS messaging.

7 Q Well, just before the hypothetical negotiation,
8 both parties knew that SMS and MMS were increasing in
9 use quite considerably, correct?

10 A Right, for the reasons that you suggested, not
11 necessarily having to do with the patent.

12 Q In fact, three years before the hypothetical
13 negotiation, the number of SMS messages doubled, and
14 then two years before, they doubled again, and the
15 year before, they doubled again, is that right?

16 A Those are relatively -- that's true, they did
17 double in those time periods, though that's no
18 guarantee of future growth.

19 Q I'm just trying to understand what the experience
20 was of those two parties in this meeting. Let's
21 suppose it happened in Helsinki, Finland and Sprint
22 came in there, walked in the door, sat down at the
23 table. Before anybody said anything, both parties
24 knew that this text messaging was doubling and
25 doubling and doubling again, before anybody mentioned

1 anything about the patent, right?

2 A Right. And they would be talking about all the
3 things that had come together that made that
4 possible.

5 Q And between 2005 and 2006, the monthly volume of
6 text messaging and MMS messaging doubled again,
7 correct?

8 A That's correct, for various reasons.

9 Q And between the time of that meeting and
10 September 30th of last year, Sprint alone sent and
11 delivered more than 2 trillion SMS and MMS messages,
12 correct?

13 A Well, we're talking about what was known at the
14 hypothetical negotiation, and that was not known at
15 that time.

16 Q But it's sometimes possible to look at what
17 happened after the fact to figure out what the
18 parties would have agreed to at the negotiation,
19 correct?

20 A I think that that's not entirely correct.

21 (Pause in proceedings.)

22 Q Do you agree that evidence in a case like this is
23 not necessarily limited to facts predating the date
24 of the hypothetical negotiation and that in certain
25 circumstances, factual developments occurring after

1 the date of the hypothetical negotiation can inform
2 the damage calculation?

3 A Yeah, I do agree with that. I'm just saying you
4 have to be very careful about how you use information
5 that comes later. You can't take, you know, the
6 actual sales that happened in 2016 and say well,
7 everybody back at the date of the hypothetical
8 negotiation would have known that would have
9 happened. They would also have been thinking about
10 well, what the heck happens if, you know, some other
11 technology comes in or if our servers don't work
12 properly? There are all sorts of risks that they
13 would be concerned about, including the risk that SMS
14 might not grow or that people would decide to
15 communicate in other ways.

16 Q But you're not suggesting that it's inappropriate
17 to look at evidence that happened after the date of
18 the negotiation in determining what a reasonable
19 royalty is?

20 A That's right. If you don't have better
21 information, such as a comparable that we have in
22 this situation, then, you know, you might have to
23 take into account what actually happens as an
24 indicator of what was in the state of mind or what
25 would have contributed to the state of mind to the

1 people in the hypothetical negotiation, just as if
2 there had been a collapse in the sale of SMS. That
3 would give you some indication or remind you that you
4 would need to take into account the risk of making
5 any investment in providing a service like this.

6 Q Well, Sprint at the time of the negotiation had
7 already taken the risk of providing a service like
8 this, correct?

9 A That's correct.

10 Q So at the date of the hypothetical negotiation,
11 they were off and running, right?

12 A They were off and running, but they realized that
13 there was a risk and that there were things that they
14 would continue to need to do in order -- in order for
15 the texting to continue to be a service that they
16 could provide.

17 Q Well, they were already providing it.

18 A That's correct, but just because they were
19 already providing it doesn't mean that they were
20 ready to scale up to much larger levels of sales or
21 that they recognized that there was a possibility
22 that telecommunication services doesn't work. I've
23 been involved in lots of cases where people have
24 developed telecommunications ideas that didn't pan
25 out, and this might have been one of them.

1 Q Well, they already knew it was panning out to the
2 extent that they had -- were delivering billions of
3 messages in 2005, isn't that right?

4 A Well, they were delivering lots of message in
5 2005, but they didn't know what was going to happen
6 in the future.

7 Q And one risk that they hadn't covered was the
8 risk that they might get sued for infringement of
9 this patent, and when they walked into that room they
10 knew they were infringing the patent and so did
11 Nokia, right?

12 A Well, technically, not because you're supposed to
13 do the hypothetical negotiation just before the --
14 before the patent becomes enforced.

15 Q Right, so the date of this hypothetical
16 negotiation that we've been hypothesizing about is
17 the date the patent was granted, and the very day the
18 patent issued from the United States government is
19 the day that the infringement began, right?

20 A Okay. Well, I don't want to quibble about that.
21 That's correct.

22 Q Now, Ms. Riley said that there were three
23 standard methods of patent valuation. She referred
24 to them as the income approach, the market approach,
25 and the cost approach, correct?

1 A Yes.

2 Q And she applied, or tried to apply, the income
3 approach, correct?

4 A That's correct.

5 Q That approach values patents based on
6 expectations of economic income that may be generated
7 from use of the patented property, correct?

8 A That's correct. It's got to be tied to what the
9 patent actually contributes to the provision of the
10 services at issue here.

11 Q So the income approach looks at the infringers
12 use of the invention, correct?

13 A It looks at the value that is derived from the
14 infringers use of the invention, just the invention
15 itself, not the overall product.

16 Q And, as we talked about, the patent statute says
17 that the patent owner, if infringement is shown, is
18 entitled to a reasonable royalty for the use made of
19 the invention by the infringer? We've already talked
20 about that, right?

21 A That's correct. You should get whatever the
22 patent is worth, whatever --

23 Q But you --

24 A -- for instance, the market would show you the
25 patent is worth.

1 Q But you take exception to her use of the income
2 approach in this case? You talked about that in your
3 direct examination, correct?

4 A That's correct for the reasons I stated.

5 Q Now, one reason you say that the income approach
6 would have been -- is inapplicable in this case is
7 because Sprint would have wanted a -- I think you
8 used the term "lump sum?"

9 A No, that's not why it's inappropriate.

10 Q You think the parties would have agreed to a lump
11 sum?

12 A That's correct. And you can use the income
13 method to calculate a lump sum royalty.

14 Q All right. I think we ought to define some terms
15 here because I'm going to talk over you I think or
16 vice versa. There's "lump sum." Comcast is asking
17 for a royalty that's calculated in terms of a royalty
18 per message times the number of messages?

19 A Yes.

20 Q Can we call that a running royalty?

21 A Yes.

22 Q And Ms. Riley took that running royalty and
23 converted it to a lump sum amount. She suggested
24 that the correct amount was \$153 million, correct?

25 A That's correct. That's her summation of a

1 running royalty.

2 Q That's her summation? But it's a single number
3 that is the multiplication of the royalty base times
4 the royalty amount, correct?

5 A Right, a single number that's the royalty rate
6 times the number of messages.

7 Q So you would call that a summation? I just want
8 to --

9 A Yeah.

10 Q -- define some terms so that we can keep straight
11 the difference between a lump sum amount and a
12 running royalty amount that's converted to a single
13 number.

14 A Yeah, sure, a summation, that's a --

15 Q You call that --

16 A -- that's a fine word.

17 Q -- a summation?

18 A Yeah.

19 Q So she put forward a summation number that's the
20 sum of the rate times the base?

21 A Yes.

22 Q Now, when you turn -- use the term "lump sum" do
23 you mean paid up?

24 A Yeah, I think that if "paid up" means that in
25 this case Sprint agrees to pay Nokia \$1.5 million and

1 gives over -- and for that, gives Sprint the
2 unlimited right to use the patent in the manner that
3 it's being used in the Sprint network now, that's a
4 paid up, or lump sum, license.

5 Q Can we call -- when we talk about lump sum let's
6 use the term "lump sum paid up amount."

7 A Great.

8 Q That way we're clear about the difference between
9 these two things for the jury's --

10 A Yeah, that's --

11 Q -- benefit.

12 A That's good.

13 Q All right. So is it your opinion that Sprint in
14 the negotiation with Nokia would have preferred to
15 have paid a lump sum paid up amount for the life of
16 the patent?

17 A I think Sprint would have preferred it and I
18 think Nokia would have preferred it also.

19 Q You're saying Sprint and Nokia would have
20 preferred a lump sum that didn't go up and down based
21 on the amount of use of the invention, rather than a
22 royalty that fluctuated based on what might happen in
23 the future?

24 A That's correct. I think that based on the
25 relative value of the patent compared to the value of

1 the operation of the entire cellular network, both
2 sides would have thought that, you know, the
3 transaction's cost would have been -- just be easier
4 just to write a single check and be done with it.

5 Q And if that single check turned out to be a fair
6 valuation of the actual use of the invention,
7 everybody would have been happy, right?

8 A Well, the rate that they would have agreed to at
9 the time would have been one that both sides felt was
10 fair for the use of the technology as they saw it at
11 the time of the hypothetical negotiation.

12 Q So in other words, you're saying at the
13 hypothetical negotiation, the parties would have
14 looked out into the future and made their best
15 estimate about what was going to happen in terms of
16 how much this patent would be used, and they would
17 take that usage into account in figuring out what
18 that lump sum paid up amount should be?

19 A They would have taken that into account and they
20 would have taken into account the costs of building
21 out the system to accommodate those grow -- that
22 growth, if they was -- if they were forecasting
23 growth, the cost of the customer services and the
24 other engineering costs that might be necessary to do
25 that, and they would also take into account the risk

Dr. Cox - Cross

97

1 that -- the risk that messaging was going to fail or
2 that something else would come in and replace it.

3 Q But, as it turned out, it didn't fail?

4 A Well, that's as it turned out, but that doesn't
5 mean that you don't have to take into account risk at
6 the time of the hypothetical negotiation.

7 THE COURT: I'm looking at the clock. I
8 think you should plan to reach a logical breaking
9 point very soon.

10 MR. HEIST: Well, why not -- ths is as
11 good -- I'm not going to finish this topic in five
12 minutes, Your Honor. I think maybe it would make
13 sense to break now and resume on -- next session.

14 THE COURT: All right.

15 MR. HEIST: Thank you. Thank you, Doctor.

16 THE WITNESS: Thank you.

17 THE COURT: Let's go quickly to sidebar.

18 THE WITNESS: Am I dismissed, Your Honor?

19 THE COURT: You may -- you may step down.

20 THE WITNESS: Thank you.

21 (Sidebar discussion as follows.)

22 THE COURT: I think what we ought to do is
23 recess now, and with this witness pick up on Tuesday
24 morning.

25 MR. GOETTLE: Your Honor, good news and bad

1 news. The good news is --

2 THE COURT: I only want to hear the good
3 news.

4 MR. GOETTLE: You only want to hear the
5 good news?

6 THE COURT: Yes.

7 MR. GOETTLE: Okay. Well, that's good.

8 THE COURT: It isn't snowing.

9 MR. GOETTLE: The good news is that in
10 talking to Mr. Finkelson, we think there's a -- that
11 the most likely outcome is this case is to the jury
12 on Thursday. The bad news is that we do not want to
13 proceed with our rebuttal case on liability on
14 Monday. The reason for that is because there are
15 technical aspects of the damages witnesses that
16 they're testifying to that Dr. Akl may need to be
17 responding to. And so we feel like it will -- it
18 could prejudice us in putting on our rebuttal case
19 and putting on Dr. Akl before we've heard all of the
20 damages testimony.

21 THE COURT: Although you could put him back
22 on.

23 MR. GOETTLE: We could do that, and I
24 thought about that too, Your Honor, but I feel like
25 that's prejudicial as well because then it looks --

1 it just looks like we're drawing this out, and the
2 jury has been here for a long time, and I would -- I
3 would greatly prefer to put him on one more time and
4 address everything that he needs to address. But I
5 do want to remind the Court of the good news that I
6 mentioned earlier.

7 THE COURT: I forgot that good news.

8 MR. GOETTLE: Yeah.

9 THE COURT: Will you remind me again,
10 please?

11 MR. GOETTLE: The good news, Your Honor, is
12 that under a reasonable estimate of how things have
13 been proceeding -- and we've been proceeding very
14 well -- the jury will have the case on Thursday we
15 think, and my thinking is we're going to have a
16 verdict on Friday. But even if the deliberations get
17 pushed to the following week, I'd be surprised if it
18 went very far into the following week. And I did do
19 a little kind of running calculation. We are at
20 seven and a half days of the trial since we've gotten
21 a jury seated. We're at seven and a half days, and
22 that would be right on the ten, maybe a half a day
23 more than the ten days that we had estimated. So
24 we're doing good.

25 THE COURT: Except I count jury selection.

1 MR. GOETTLE: Okay. So we're at 12.

2 THE COURT: Yes.

3 MR. GOETTLE: But it would be our
4 preference to not put on a rebuttal case before the
5 damages.

6 THE COURT: And Finkelson agrees. I can
7 tell you as bitterly fought as cases are, when it
8 comes to issues like this, the --

9 MR. FINKELSON: Things tend to align or
10 there tends to be (indiscernible).

11 THE COURT: They certainly do. It's
12 like it's all the lawyers against the Judge.

13 MR. FINKELSON: Well, we'll proceed however
14 makes the most sense.

15 THE COURT: No, I --

16 MR. FINKELSON: We have no objection to
17 what Mr. Goettle is saying.

18 THE COURT: The case is a big one and I'm
19 not going to subject you to what might conceivably be
20 viewed as a disjointed rebuttal.

21 MR. GOETTLE: Thank you, Your Honor.

22 THE COURT: So what you're proposing is
23 that we recess the jury until Tuesday?

24 MR. GOETTLE: Yes, Your Honor.

25 THE COURT: We'll convene again -- I think

1 I want to do a little more reading. We'll get
2 started on the charging conference at 2:00.

3 MR. GOETTLE: 2:00? Okay, Your Honor.

4 THE COURT: And you may leave, again, with
5 our condolences.

6 MR. RIOPELLE: Thank you, Your Honor.

7 THE COURT: My son was supposed to be
8 flying in from London. I hope all of the flights
9 weren't cancelled.

10 MR. RIOPELLE: I suspect what's going on is
11 that the major flights, you know, the transatlantic
12 ones and the ones that go from like L.A. to --
13 they're going. It's those little flights that are
14 going to little places in Virginia (indiscernible) we
15 can use that equipment somewhere else. That's what I
16 think is happening.

17 THE COURT: Well, safe trip back to
18 Virginia.

19 MR. RIOPELLE: Thank you.

20 THE COURT: And we'll see you on Tuesday.
21 For the jury, we'll be in recess until 9:30 on
22 Tuesday morning.

23 MR. GOETTLE: Thank you, Your Honor.

24 MR. RIOPELLE: Thank you, Your Honor.

25 THE COURT: All right.

1 (Sidebar discussion concludes.)

2 THE COURT: Mr. Riopelle, you can -- you
3 can leave.

4 (Pause in proceedings.)

5 THE COURT: Ladies and gentlemen, a word on
6 our schedule. As the lawyers explained it to me,
7 there's good news and -- well, I think from your
8 perspective, good news and good news. The good news
9 is the lawyers expect to finish their testimony
10 sometime Wednesday, maybe Thursday morning, which is
11 pretty close to our estimate. And in a long case
12 it's pretty hard to estimate just how long it will
13 take to complete. Because of situations presented by
14 the attorneys, you're going to be in recess for this
15 afternoon. We're not sitting this afternoon. I'll
16 be talking to the lawyers, but we won't present any
17 testimony. And Monday, day off Monday. We can't
18 proceed because of issues that I think are
19 appropriate. And we'll convene again on Tuesday
20 morning at 9:30.

21 The schedule right now looks like the
22 evidence will be completed sometime Wednesday, maybe
23 Thursday morning. We'll then hear closing arguments,
24 followed by my instructions on the law, which means
25 you should begin deliberations, as best we can

1 predict, Thursday, probably in the afternoon. More
2 on that later. But the good news is you can go back
3 to doing at least some of the things you ordinarily
4 would do this afternoon and Monday.

5 Day-end instructions. Do not discuss the
6 case among yourselves. It's getting more and more
7 tempting, but don't. Don't discuss the case with
8 others. The reason, you can't begin deliberating
9 until you've heard all the evidence. That takes care
10 of talking among yourselves. As far as others are
11 concerned, the reason why not, because you've got to
12 decide the case based on the evidence you hear and
13 see in the courtroom, and not based on what someone
14 else might tell you about the case. As far as radio
15 and television, newspapers, don't read anything about
16 the case, don't listen to anything about the case,
17 and don't view anything on television that might be
18 broadcast. And lastly, don't try to do any research
19 using social media. No research. You cannot bring
20 into the case anything that is not presented in the
21 courtroom. With that, have a good long weekend. Be
22 sure to leave your notebooks and your binders in the
23 jury room. See you Tuesday morning, 9:30. Have a
24 good weekend.

25 (Jury out, 12:05 p.m.)

1 THE COURT: Be seated, everyone. What we
2 will cover this afternoon -- and we'll start with the
3 evidentiary issues. The issue that was presented
4 yesterday, does evidence used only on cross-
5 examination go out with the jury? I'm talking about
6 exhibits. Mr. Riopelle mentioned his tape used on --
7 and the transcription of the tape used in cross-
8 examination of Mr. Marcus, and compared that to the
9 demonstrative exhibits that were created by Mr.
10 Goettle in his cross-examination of Dr. -- I think it
11 was Dr. Polish, but it might have been other
12 witnesses as well. And I think there might be a
13 difference. I'm not ruling now. One is a
14 demonstrative exhibit, and that's the -- those are
15 the exhibits -- I've forgotten how they were
16 identified. I can tell you that a more simple way of
17 identifying exhibits is a goal to be desired, but I
18 think there might be a difference between that type
19 of demonstrative evidence and something used just on
20 cross-examination of a witness to impeach. So focus
21 on that, and if you get a chance between now and
22 2:00, someone might research it. We've started.

23 We were -- well, we decided on the Akl
24 rebuttal. I was hopeful that we could begin that on
25 Monday, but under the circumstances presented by Mr.

1 Goettle with a modest objection, I decided that that
2 might put Comcast at a disadvantage, and I don't want
3 to do that, with the only goal being getting the case
4 to the jury sooner. The good news that the case will
5 go to the jury probably on Thursday is fine, and
6 we're not really that much off schedule. I don't
7 think there were any other issues. Certainly, we're
8 going to have a charging conference, but we'll talk
9 first about that evidentiary issue that I've just
10 mentioned and any other issues. Now, are there any
11 other issues that need to be presented?

12 MR. GOETTLE: Not from Comcast. I don't
13 think so, Your Honor.

14 MR. FINKELSON: Nor from Sprint, Your
15 Honor.

16 THE COURT: All right. Well, we'll start
17 with this evidentiary issue and then get into the
18 charging conference. I must tell you I am still
19 concerned about the running royalty and the lump sum
20 royalty and how the jury should be instructed. And
21 that will be the focus of the charging conference. I
22 think everything else falls into place. I'll have a
23 copy of the standard instructions, pattern
24 instructions, of the D -- that's the D.C. Bar
25 Association. And we'll go from there. I must say as

1 I read those instructions again last night, some of
2 them are rather difficult to understand.

3 MR. FINKELSON: I will note, Your Honor,
4 and we can talk about this at the charging
5 conference, that we had proposed one additional -- or
6 one addition to one of the instructions with respect
7 to obviousness that we just sent over to Comcast this
8 morning. I know they're reviewing. So that will be
9 an issue that we'll raise at the charging conference
10 as well. All right. Fine. We're in recess -- yes?

11 MR. HOFFMAN: I was going to say and, Your
12 Honor, based upon Dr. Cox's testimony, we are also
13 going to be submitted one small additional jury
14 instruction that we'll provide to counsel over the
15 lunch hour, and that's up for discussion with the
16 Court.

17 THE COURT: Well, I think we've got to look
18 hard at the instructions on damages and royalty.
19 We've taken them from the pattern instructions. I'm
20 not certain that that's clear enough. I don't want
21 to re-invent the wheel, but this wheel seems to have
22 been written for driving by accomplished patent
23 lawyers. And, unfortunately, I'm going to have to
24 explain the law to a group of jurors who are not in
25 that category. I mean I read one phrase over and

1 over again and it almost defies understanding. But
2 we'll talk about that. And because I want you to
3 have lunch and get back and do a little work in
4 between, we're in recess until 2:00.

5 (Luncheon recess taken, 12:11 p.m.)
